## "Red Alert" Out as Screwworms Build Up Across The State

A "red alert" is being sounded throughout the state as screwworms continue to assault livestock and other animals, says Gergross, County Agricultural Agent. Callahan County has not recorded any cases to date, but it's most important that all animals be checked closely and regularly for infestations.

Weather conditions were favorable for heavy screwworm buildups last winter in northern Mexico as well as in parts of the Southwest. Some infestations were also spread by transporting infested livestock last fall, and the insect pest spent the mild winter in new quarters. This spring overall conditions were "ripe" for a massive screwworm invasion.

According to County Agent, Greg Gergross, more than 2,300 cases have been confirmed in Texas this spring, the earliest and heaviest outbreak in the history of the Screwworm Eradication Program.

Although sterile fly production at the Mission Lab is running at its peak -- 200 million a week -- treatment with these flies is not enough to stop the destructive, flesh-eating livestock pest. Gergross urges all livestock producers and owners of other animals (dog, cats) to follow certain precautions:

1. Carry out all approved preventive practices to help eliminate screwworms.

2. Inspect animals regularly

and carefully and treat all wounds whether they are wormy or not.

3. Delay all surgery until cool weather this fall. Shearing, docking, castrating and dehorning only provide additional wounds for worm infestations. Studies show that almost 90 per cent of all worm samples come from calf navels and man-made wounds.

4. Spray animals with an approved product before shipping them. This is a preventive measure against spreading the infestations.

5. Be cautious of livestock shipments coming from infested areas. If buying such animals, be sure to check them thoroughly for wormy wounds.

6. Care should be taken not to move infested livestock across state lines. Infestations resulting from this practice may bring a quarantine and the regulated movement of livestock.

7. As soon as a wormy wound is found, send a worm sample to the Screwworm Laboratory, Box 696, Millton, Texas 78572. If the case is positive, sterile flies will be dropped as soon as possible to further protect animals in the area.

"Everyone must cooperate if the screwworm eradication program is to be effective, emphasizes Gergross. "This means farmers, ranchers, pet owners, auction managers and others who work with or own animals."

*We'll review your farm loan annually—to make sure you're getting the lowest possible interest rate.*

With the Federal Land Bank's Variable Rate Plan, your mortgage is reviewed every year to adjust the interest rate to meet current economic conditions. When interest "floats" in this manner, you pay according to prevailing rates in the money market. What could be more fair?

This new concept in farm and ranch financing still gives you the traditional Land Bank advantages. You may prepay part or all of the loan at any time without penalty. You can make the loan for extra years . . . to keep payments small and easier to handle.

Why be tied to an inflexible interest rate . . . when there is a loan plan designed to always give you the lowest interest rate possible. We would be glad to explain all the facts about the Federal Land Bank's Variable Rate Loan Plan at your convenience.

**BAIRD** — W. L. Catfish is an 64-year-old fisherman, and to prove it, he is shown above standing beside a 50 pound catfish he caught May 23rd in Baird Lake. This yellowcat was caught with a big minnow on the same line he caught a 25-pounder about four weeks ago. "Catfish," as he is known here in Baird where he has lived the past three years, furnished the delicious fish for the American Legion fish-fry held recently. We hope that his luck continues so that another fish-fry can be held soon.
