NUMBER 34

Taylor Bedding Mfg. Co. Will Get Army-Navy Award

When Brig. Gen. J. A. Commanding General of the San Antonio Army Service Forces Depot, presents the Army-Navy "E" Award to the employees of Taylor Bedding Mfg. Co. at Taylor, Texas, on July 28th its presentation will mark acknowledgment of the company's "fine record in the production of material sneeded for the war" including mattresses, comforters and operating table pads for our armed forces around the world.

This is not only an award to the management and the men and women workmen at the Taylor Made plant but is also a tribute to the cotton farmers of the Southwest who raised the cotton. It is entirely possible that Lieut. John Doe is sleep ing on a mattress made of cotton grown on his dad's farm.

From a humble begining in 1903 the Taylor Made plant is now the world's largest, employing over 600 workmen on a round-the-clock schedule and shipping 9 carloads of bed ding daily during peak periods. Since Pearl Harbor the factory has devoted a large part of its huge output to vital bedding needs for the war effort, reserving only a small portion for its normal production of mattresses, furniture, cot ton batts, etc., for civilan use.

At the presentation ceremony the employee oldest in service, Charles Fuhrmann, who has just rounded out his 39th year of service, will accept the award on behalf of the employees. No small part of the production record made is due to the hundreds of women employees who have taken the place of their husbands and brothers who have en tered the armed forces.

B. L. Boydstun is local representative of the Taylor Bedding Mfg. Company in Baird.

Will Present E Award To "Taylor-Made" Plant

MOSE ISAACK DIED IN T and P HOSPITAL

> MAINTENANCE OF MILK PRODUCTION

Maintenance of milk production is

greatly influenced by the quantity of feed that goes into the silos in the next 3 months. With the feed situation as ii is, most doiryman will make his greatest efforts to store at lease 3 tons of silage for each cow in his herd. In most years it required 3 tons to furnish a cow all of the

In order to obtain the maxium milk production at the lowest cost, cows should have all the roughage (silage, grass ond hay) they can eat.

milk, than will hay alone, when the cows are getting no green pasture.

Before dusting for flea hoppers, feed in order to produce milk. It is will have to drink.

The other reason why cows need bout the size of a gnat fly, which silage when green pasture is not to be had, is that silage when made right, furnishes vitamin A. Cows cannot maiintain production without an odequate supply of this vitamin. A shortage of Vitamin A, not only lowers production, but the milk will not keep properly. A few hours af-

Thousands of men arriving for work in a Bethlehem shipyard. Down this yard's busy shipways slide many of the nation's cruisers, destroyers and aircraft carriers. Bethlehem repeatedly has made records for delivering vessels well ahead of schedule.

This is the story of manpower in Bethlehem steel mills and shipyards, of men and women who have come by the thousands from all walks of life to do a job in backing up our fighting forces with a continuous flood of materials. These men and women are vital to the battle of production.

Manpower at Bethlehem Steel has been multiplied three times in three and a half years. Here

NUMBER OF BETHLEHEM EMPLOYEES

Poland invaded, September 1939 100,000 Fall of France, summer 1940.....120,000 Pearl Harbor, December 1941...190,000 Tunisia, May 1943...

Facts About Bethlehem Workers

manpower is the heart of Bethlehem's current production of a ship a day. Manpower makes possible the meeting of its large commitments for ordnance and other war-steel products. All other problems such as materials and supplies are secondary — the essential dependence

Thousands of men from non-essential trades are joining Bethlehem war-work armies. More than 13,000 women are employed at Bethlehem plants and shipyards, and the number is constantly increasing.

Veteran employees are zealously teaching the newcomers, so that they can quickly handle their appointed tasks.

New employees earn while they learn, in special training classes and in on-the-job training. Sympathetic study of each person's abilities puts "square pegs in square holes." Wages are the highest in the history of shipbuilding and steel, and in the top group of

Promotion is rapid, as opportunity to advance comes far more swiftly than under normal

Bethlehem employees are friendly, high-grade people. The great majority have education in the high school grades, and thousands are graduates of colleges, crafts and professions. More than 50,000 Bethlehem employees are now serving in the armed forces, a fact which gives added seriousness of purpose to those working to produce the supplies.

To work in Bethlehem shipyards and plants is to be in the front line of industry, doing a real job to help win the war.

SOME NEW BETHLEHEM EMPLOYEES FROM VARIOUS OCCUPATIONS

to to to materials inspector, meter repairman, ship draftswoman.

Employment in Bethlehem's shipbuilding and ship repair

yards alone has grown from 15,000 in 1939, to nearly 180,000. The enlistment in our manpower army continues from week to week and from month to month. The total of Bethlehem employees will exceed 300,000 by the end of the year. To reach this total force, and provide for replacements of those going into the armed services and others, many thousands more men and women will

FROM ALL OCCUPATIONS

Bethlehem workers come from virtually every walk of life to serve in these war-work armies. Here are 60 instances of former occupations of men and women who are now producing ships and combat materials.

GLASS JARS FOR VICTORY CANNING

Photo Courtesy Ball Bros. Co.

Plan to can every extra vegetable from your Victory garden and don' Plan to can every extra vegetable from your victory garden and don worry if your dealer hasn't jars with the kinds of caps you have been accustomed to using. Gladys Kimbrough, Home Service Director of Bal Brothers Company, tells us that very few of the all-time favorité zinc capare left on the home front because zinc is needed on the battle front, but all Mason jars (any brand) with smooth, even top edges can be sealed with glass top seal or two-piece metal vacuum seal closures.

Glass top seals consist of glass lid, rubber ring, and metal screw band, able because a deeper band is need

Glass top seals consist of glass lid, rubber ring, and metal screw band. The rubber is placed around the projection on the bottom of the lid, then lid with rubber is placed so that the rubber rests on top of the jar. The bands are screwed down tight, then-loosened slightly before the jars are put into a canner for processing and screwed tight immediately after the jars are removed from the canner. After the jars have stood twelve or fifteen hours, the bands are removed and used to seal more jars with glass lids and rubbers, thus making a little metal go a long way. That's one reason Government offi-

That's one reason Government offi-cials smile upon home canners who

use glass top seals.

Another good top seal for Mason jars is the two-piece metal cap, called vacuum seal. The lid is slightly dome shaped, lined with white enamel and has a rubber sealwhite enamel and has a rubber sealing compound around the outer edge to take the place of a regular jar ring—(don't let anybody fool you—all sealing compounds contain rubber). If one is using old-fashioned open kettle (never use this method for canning vegetables), the lids for canning vegetables), the lids are boiled a few minutes to sterilize, but need only to be dropped into boiling water and kept hot if the jars of food are to be placed in a canner for processing. After the lid canner for processing. After the lid is placed on the jar, the metal band is screwed tight once for all. Retightening the band after the jars are taken out of the canner is likely to prevent sealing. The bands are removed from the jars twelve or fifteen hours after the canning is done

Bands for glass top seal and vacuum seal caps are not interchange able because a deeper band is need ed for the glass lids, but the two have one thing in common. Neither is rust-proof. That's because of the zinc shortage, but a quick wiping after each use with a cloth mois tened with paraffin will prevent se ious rusting. It will save time and rouble too, if a cloth is prepared thead of time and kept in one o warm water until the paraffir The "lightning" jar (so called be

The "lightning" jar (so called be cause it is quickest to seal) require very little metal and not too mucl rubber for sealing. Several manu facturers make this type jar. I seals with a glass lid and rubbe held in place with wire bails. The wires used on one nationally known brand are of heat-treated, high-ten sion, stretch-proof, spring steel. This sion, stretch-proof, spring steel. Thi is the ideal jar for home canning any year because it is so easy t seal. The rubber is placed on the sealing surface or shoulder, the li-comes next, then the upper bail win is pushed up until it rests in the groove in the top of the lid. Pay n attention to the lower wire, it take care of itself until after the jars ar. removed from the canner—then it i pushed down against the side of th jar and that's all there is to sealin

When buying jars, choose pints fo peas, corn, and shelled beans—an quarts for all other vegetables. Hall pint sizes aren't being made, an half-gallons are unsuitable for car. teen hours after the canning is done and used to seal more lids on other jars. Jars sealed with two-piece metal caps are suitable for all types of canning except oven—a tightly the jar. ning vegetables because it takes to long for heat to reach the center c

Keep Vitamins In Home-Canned Tomatoes

The tomato rates respect because it is chuckful of vitamins (A and C), those invisible spark plugs that keep one feeling fit.

Because tomatoes are an impor-tant food, it is imperative that every one not needed for immediate use be saved by canning, but they must be canned right, else there will be

Photo Courtesy Ball Bros. Co. little or no vitamin C left in them. Undue exposure to air after the skins are removed and over-cooking in an uncovered container destroy vitamin
C. This is one reason that tomatoes
should be prepared and canned as
quickly as possible. Usually whole
tomatoes have more food value than

tomatoes have more food value than tomato juice, partly because a considerable amount of vitamin A is lost in the pulp that fails to go through the strainer when the juice is made, but mainly because greater exposure to air destroys vitamin C. If you want first-class canned tomatoes, use freshly gathered, firmripe, sound fruit—one small bad spot can ruin a whole batch. Wash the tomatoes before scalding; scald a few at a time. Remove all core, slip off the skins, and cut away green spots. Pack the tomatoes tight into clean hot jars—this is best done by pressing each tomato down with a wooden spoon. Add salt to season to suit your taste—the usual amount is one teaspoon to the quart. Seal is one teaspoon to the quart. Seal jars according to manufacturer's instructions and process 35 minutes in hot water bath. If tomatoes are not fresh from the garden, process

45 minutes.

No juice can be better than the fruit from which it is made, so be sure to use strictly fresh, firm-ripe. red tomatoes, which are free from all decay. Wash well and cut away any green spots or weather cracks. Weather cracks are those splits that form around the stem ends when hot sunshine follows a hard rain. Such tomatoes are unfit for canning or juice unless used immediately after picking. Leave the tomatoes whole and steam or bake them until they are soft; then press through a fine sieve, preferably a cone-shaped one; reheat the juice to simmering; pour into sterilized jars and process. one; reheat the juice to simmering; pour into sterilized jars and process 30 minutes at simmering. The pulp will separate from the juice unless a very fine sieve is used or if too much heat is applied at any time. Oh, so you boil the juice in an open kettle until it is thick? Well, that's a fine way to get rid of most of those precious vitamins.

The best tasting juice is that many

The best tasting juice is that made by pressing whole home canned to matoes through a sieve just before serving. Any seasonings liked mabe added before canning but the juice will be better it seasoning except salt are added when the seasoning except salt, juice is opened for serving, and ev

What is inflation?

Do you have excess cash? You will answer, "No." But the fact remains that you do. For almost every wage earner these days has an income, in checkbook or pocketbook, well above the cost of his living, taxes, insurance and debt repayments.

You never actually "bid" against anybody for a porterhouse steak, but when you take the spending of all average Americans as a group, it's a different story. So it is important that excess money be saved rather than used collectively to bid up prices. If it is spent, instead of saved, prices soar. . . That's inflation.

Ideally, it should be invested in Government securities dur-"They give their lives . . . You lend your money.'

Corn-Home-Canned to Keep!

"Corn, a favorite food of man, beast, and bacteria, is the victim of defense propaganda and I am not talking about war." Gladys Kimbrough, Home Service Director of Ball Brothers Company, made the above statement and went on to explain, "Persons who refuse to take the time and trouble to understand corn, defend their capping failures the time and trouble to understand corn, defend their canning failures by claiming that it refuses to keep. The truth is, corn is more than willing to be canned, but is doomed to spoilage unless right tactics are used, because it has no acid to protect it against the invasion of bacteria. Tactics? Why," says Miss Kimbrough, "they can be summed up in one sentence: i. e., learn what is to be done, begin at the right time, keep things moving, and turn on the heat."

The first thing to be done is to get jars, lids, rubbers, and canner ready. If you have no pressure cookready. If you have no pressure cooker, get along with a water-bath canner. Examine every jar and lid to see that it is in good condition—remember glass top seals and two-piece metal vacuum seal caps won't work unless the top edges of the jars are perfect. Wash everything clean; cover jars, glass lids and zinc caps with luke-warm water and put on the stove to heat. Cover vacuum seal lids and rubbers with boiling water and leave until needboiling water and leave until needed. When everything is ready, gather the corn—bring in no more than needed for one canner full. Keep in mind that canning too much too late is a common cause of spoil age. Place the corn on a board age. Place the corn on a board and use a strong sharp knife to cut the husks (shucks to you in the Middle West and South) off at each end just where the corn begins and ends. There shouldn't be any worms if you have followed Victory garden directions, but if there are worms in the tassel end, cut deep enough to leave them with the husks. The husks will come off easily and bring most of the silks with them.

Examine every ear of corn and

most of the silks with them.

Examine every ear of corn and use only those having plump, glossy, juice-filled kernels. Remove all silks; rinse the corn and cut it from the cob. One or more cuttings may be made, but scrapings should not be used unless processing can be done in a pressure cooker, because the scrapings make a thick mass that heats through slowly. Cover the corn with boiling water, using about half as much water as corn; cook five minutes; then pour immediately into clean, hot jars. A generous amount of water helps the corn heat through quickly and aids in preventing its sugar from carmelin preventing its sugar from carmelizing and causing a brownish color. Add one teaspoon salt to the quart and seal jars according to manufacturer's directions. Then put into the canner and process.

the canner and process.

If possible, use pint jars, as they heat through more rapidly — the quicker the jars can be heated through, the more certain the destruction of bacteria. Process pints and quarts 70 minutes at 10 pounds pressure or by boiling 3½ hours in hot-water bath. Remove the jars from the canner as promptly as possible after processing; finish sealing sible after processing; finish sealing all jars that require rubber rings; air jars that require rubber rings; set jars as far apart as possible on folded newspaper or cloth so they can cool quickly, but be sure they are not where a breeze will strike

The jars should be examined after twelve hours in order to make sure they are sealed. To do this, remove bands from glass top seals and metal vacuum seal caps (leave the bands off when the jars are put the bands off when the jars are put away). Test the glass top seals by pulling gently on the lids with the finger tips. Vacuum seals are tested by pressing down on them with the fingers—if sealed, they won't move under this pressure. "Lightning" are followed and there won't be any spoilage if you keep in mind that Vigilance means Victory. Furthermore, you will never know how good canned corn can be until you have tasted your canned corn can be until you have tasted your own home-canned brand

It's A People's War

We are paying more in taxes than ever before . . . and likely will pay more. But we cannot rely on taxes to finance the war. It would not be fair to base a tax on the average single family income when many families have more than one income. We could borrow all the money from the banks, but for both economic and social reasons this is undesirable. The government would then sacrifice its greatest dam against inflation. This is a People's War and the people should finance it. The people WANT to finance Sale of War Bonds has mounted consistently since

To Hasten Victory

No American wants this war to go one minute beyond the time we can bring it to a victorious end. To hasten that victory—to save possibly the lives of millions of our boys on our far flung fronts—it is imperative that every American do his part in the Second War Loan. There is an investment to fit every purse. The most you can do is little enough compared with the sacrifice offered by our boys in service. They give their lives -you lend your money.

Aid to Enemy

"Any American who wilfully neglects to pay his taxes on time or to invest every cent he can in War Bonds is surely giving aid and comfort to the enemy . . . We have a job to do and we are all called for service to our country. Our dollars are called to service Let us all ask ourselves, 'Shall we be more tender with our dollars than with the lives of our sons?" - Secretary Morgenthau.
