Digital Switching

We're using it to hold the line on higher phone rates.

Every dollar we can shave off our operating expenses is a dollar that helps us delay the need for rate increases.

Our objective, of course, is to hold the line on operating costs without reducing the quality of your telephone service.

of building new facilities.

Sometimes this requires Continental to invest huge sums of money in technological advancements that, in the long run, save money. Digital switching is one of these advancements.

helps us control costs with reduced maintenance requirements, but also provides better noise levels and faster service when you dial a number.

It handles more calls with fewer trunk lines, yet occupies about 80% less floor space than conventional equipment.

Installed in areas where fast growth is expected, the new equipment will let us meet the growth without the expense

Because the rates you pay for telephone service are based on our costs of doing business throughout our system, digital switching works in your behalf wherever we install it. It's one of the ways we're doing our best to do more for you.
