QUESTION OWNERS OF AUTO IN THIS COUNTY FOR DATA

Automobile owners of Callahan County can aid tremendously in furnishing officials information to the State-Federal Highway Planning Survey for use in working out a logical plan on which future road and street construction will be based. Olaf Hollingshead, Assessor and Collector of Taxes, has been given a number of post cards which ask for fundamental information that are needed in road planning, this affording the motorist opportunity to participate in outlining his future road program. These cards, to be distributed to car owners as they pay their 1937 registration fees, requires no postage and are self-addressed. The number of cards which have been furnished Mr. Hollingshead was judged according to the number of motor vehicles which were registered in the County during 1936. The number of cards allotted to Callahan County is as follows: 3200 for passenger automobiles, 900 for trucks, and 175 for trailers and motorcycles, and 60 for owners of five or more vehicles.

The business of constructing and maintaining highways, streets, and roads has become a tremendous task within recent years, and it now affects the well-being of every citizen. Obviously, every effort should be made to plan the public road system so that it will serve all car owners in an equitable manner and so that the tax burden for roads will be distributed justly. The information sought on these cards is vital to the establishment of an equitable, well-rounded program. In order to work out such a program, the Texas Highway Department and the United States Bureau of Public Roads are conducting a State-wide Highway Planning Survey.

FRUIT GROWERS OF AREA ARE INVITED TO PIONEER EVENT

Those interested in fruit growing in the districts of Cross Plains, Pioneer and Rising Star are invited to be present at the Pioneer school auditorium at 7:30 Thursday evening, February 25. Q. By what name was the present city of El Paso first known? H. F. A. The first postoffice established in 1857, was named Franklin, for the postmaster, Franklin Coontz. The name was changed to El Paso in 1858, when the town-site was surveyed. The county was not organized until 1871, and in 1872 the city was incorporated. San Elizario and then Ysleta were county sites, until 1883, when the county government was moved to El Paso.

Q. Where was Bevilport, for whom was it named and what became of it? T. E. A. In western part of Jasper County, named for John Bevil, who located there in 1828 and built Bevil's Mill. It was the seat of government of the municipality of Bevil, (afterward Jasper) created in 1834. When Jasper county was organized in 1837, the county site and postoffice was changed to Jasper.

Q. What railroad was built of Jefferson before the Civil War? E. D. A. A five mile line known as Memphis, El Paso and Pacific way.

County Agent's Column

R. D. Williams Eradicates Prickly Pears

R. D. Williams, a rancher of Putnam, has proved that prickly pears can be eradicated at one time by completing the operation at the right season and by property piling. He stated that the allowances made under the 1937 range program would be sufficient to enable most ranchers to eradicate prickly pears on their lands.

When labor was cheaper than it is today Mr. Williams let a contract with Mexicans to clean his land at a cost of about 40c an acre average. He said he got 100 per cent kill on all lands that he worked which were about 400 acres. Mr. Williams stressed the fact that prickly pears should be cut and piled in piles in May and June when water and heat are in abundance in the plants and on the land. He stated the most important thing to do was to see that the piles were packed closely and compactly. The size has little to do with the effectiveness. He pointed out that Gus Brandon piled his prickly pears in loose stacks and that most of them lived rather than took diseases and died. It should be remembered that prickly pears when piled in compact forms develop a fungus disease that ruins and destroys the entire stack. They do not take root around the edges as some would think but any diseased pear that touches another will give it the disease, too, and thus cause a decay of the whole.

J. F. Dyer, rancher who lives in Baird, said he eradicated a heavy infestation on his ranch at a cost of about \$1.00 per acre and Mr. Dyer states that May and June are the preferable months.

Ace Hickman also of Baird has had a similar experience with his pears, stating that those which were piled in compact stacks took diseases and died.

Mesquite Eradication
R. D. Williams also eradicated a bunch of mesquite on his ranch by the application of kerosene. His experience was that he got a better kill if put on in May when the sap was flowing freely and that the old trees with rough bark killed 100 per cent but the young trees with smooth slick bark were harder to kill. Mr. Williams said he didn't spray with a pressure, which is recommended for successful eradication, but sprayed only with an atomizer type spray gun. Mr. Dyer

NEW SAFETY FOR BABIES

Mother, most hospitals now protect their babies against germs and skin-infection by rubbing Mennen Antiseptic Oil all over the baby's body—every day. This keeps the baby's skin softer, lovelier and SAFER. So, mother, do as hospitals do, as doctors recommend. Give your baby a safety-rub with Mennen Antiseptic Oil daily thruout his diaper-days. See your druggist.

MENNEN Antiseptic Oil

said he painted kerosene on his trees and also used crude oil as it flows from the wells. His opinion was that crude oil seemed to indicate a better kill than kerosene.

Men who have done extensive work in mesquite eradication say the best results are obtained when kerosene is applied with pressure of 200 to 300 pounds. This can be obtained from a barrel spray or, of course, the mechanical power sprays such as used by J. Frank Browning in spraying his large apple orchard.

The county agent has a group of NYA boys that he will be glad to use in applying demonstration areas with ranchers who would like to study results of such a schedule if application is made to him for such service. The rancher would furnish the kerosene and provide transportation and dinner for the group.

Pecan and Walnut Top Working
The county agent did the first top working that has been asked for out of the office this past week and will continue the coming week. An old walnut tree in the yard of Mr. Tom Eastham of Admral was topped worked in preparation for budding to improve varieties in May or June. The pecan trees on B. H. Freeland's farm will be worked the coming week.

Now is the time to top work walnut or pecan trees if it is expected to place buds this summer. Limbs to be cut off should not be more than 3 inches in diameter which means that we go farther out on the limb than was done some 5 or 10 years ago before it was learned that it is a dangerous practice to cut limbs larger than 3 inches in diameter.

A limb should never be cut straight across but always on a slope so that the limbs will easily heal. Any wood that is not able to heal over will become a host for injurious insects which will cause a decay sooner or later that will destroy the limb or the tree.

Orchard Pruning
In connection with top working the nut trees quite a few inquiries have come in recently relatives to pruning fruit trees. The best practices for West Texas is to prune fruit trees from the top and not from the bottom. The county agent would recommend that peaches, apples, and plums especially be let to grow very low toward the ground. If limbs touch the ground so much the better. Low limb spread will prevent sun scald and will create a shade over the soil around the trees base which will check evaporation and will prevent vegetation growth in the form of weeds and grass. Trees should be pruned from the top in order to prevent overloading and to hold the height low enough that fruit can be gathered without the use of ladders. That means that trees should not be allowed to grow more than 7 feet in height but continually prune the limbs which will produce stockiness and prevent spreading and splitting in times of excessive fruit crops. The lower the tree and the stockier the limbs the more able it will be to withstand the high winds of early spring and the occasional storms of the summer.

Obituary

Z. H. Wilkey died suddenly, February third, at the home of his adopted daughter, Mrs. W. B. Varner of Cottonwood. Mr. Wilkey was born September 24, 1856. He came to Texas from Alabama with his mother when he was 20 years old, his father having been killed in the civil war.

On September 26, 1936, Mr. Wilkey had been married fifty years to Sarah Lee. There were no children born to this union but they reared three. They are Mrs. S. C. Richardson of Lockney, Texas; Mrs. W. B. Varner, of Cottonwood, and a nephew of Mrs. Wilkey, who died in the navy about twenty years ago.

Mr. Wilkey became a member of the Church of Christ when he was thirty years old. He was interred in the Cottonwood cemetery.
