

Entered at the Post Office at Clarendon Texas, as second-class mail matter.

Odds and Ends.

Spontaneous Combustion of Cotton.

During one of the hot days of June a Connecticut lady thought she smelled something burning up stairs. In searching for the fire she entered a small close garret room used for storage. She opened a window and instantly a bag of carpet rags hanging there burst into flame. The rags had been there all winter. The fire was promptly smothered; and when the bag was opened it was found that only balls of cotton rags were burned. Whether the rags had been dyed or not is not stated.

Leatheroid.

Leatheroid is a new article made of paper. It consists of a number of thicknesses of cotton paper wound one upon another over a cylinder. The remarkable qualities of strength and adhesion it possesses are derived from a chemical bath, through which the paper is drawn on its way to the cylinder. It is molded wet, and retains its form. When dry it can be cut like raw hide.—Scientific American.

The deplorable condition of the present mail facilities in the Pan Handle of Texas and southwestern Kansas is a matter that ought to receive the immediate attention of the Post Office Department. Since the commencement of the present fiscal year quite a number of new contractors on routes in the Pan Handle country absolutely failed to come to time, and continue the service on these important routes, thereby leaving the stockmen of that region of country without mail facilities. The only mail route that penetrates and supplies mail matter to all that region is the route from Dodge City to Mobeetie and Clarendon, Texas, leaving a large number of postoffices unsupplied. The most important are those in southwestern Kansas and those situated along the valley of the Canadian River in Texas, including the office of Tascosa, located on the extreme frontier and one of the most important offices we could name. The new contracts at the last awarding of contracts were bid off so low that parties to whom the routes were awarded find that they cannot successfully perform this service for the amount they were to receive from the Department. So the Department will claim the forfeitures on these delinquent contractors and either discontinue the routes until the next general letting of mail contracts or readvertise them and make a special letting of these routes. In the meantime the people of this section will be the sufferers through this ruinous policy of the Government in awarding contracts to persons wholly irresponsible and unable to perform the mail service required of them. We hope the people of the section referred to will not submit to this outrage but contend for their rights and not yield until their former mail facilities are restored to them and even increased rather than lessened, as they are as much entitled to mail facilities where they are as the people located along the line of the A. T. & S. F. R. R., who receive two daily mails from both east and west, while the Pan Handle people must console themselves with the fact that they can come to Mobeetie, Clarendon or Dodge City, Kansas, for their mail matter and in so doing travel all the way from one hundred to two hundred and fifty miles, and thus assist the Postoffice Department in vindicating itself on the "star route" prosecutions now in progress at Washington.—Ford County Globe.

Christianity, Temperance, Civilization--Westward.

Vol. 5. Clarendon, Texas, Friday August 11, 1882. No. 10

Sir Christopher Wren and the Carpenter.

We hear many stories of young artists leaving their native villages and country sweethearts to go to the metropolis in search of fame and fortune. An interesting true tale of this kind is told by Miss Philimore in her recent "Life of Sir Christopher Wren," the architect of St. Paul's Cathedral, London.

Philip Wood was a village carpenter, who had developed an uncommon skill in wood-carving, and had made some striking figures for the adornment of his sweetheart's house a lass above himself in rank and fortune. In the hope of improving his circumstances and thus lessening the disparity between them, he went to London, where he sought work in vain, until his store of money was reduced to a single guinea.

The huge dome of St. Paul's was then rising above the smoke of London. Philip Wood applied to the foreman for work in carving the wood for the interior. Repulsed by him he haunted the place day after day, and at last he attracted the notice of the great Sir Christopher himself.

"What have you been used to carving?" asked the architect.

The carpenter in the extremity of his agitation, could only stammer out "Troughs, your worship."

"Troughs," said Sir Christopher; "then carve me a specimen of your skill a sow and pigs—it will be something in your line—and bring it to me this day week."

The poor fellow shrank away from the laughter of the workmen, and returned to his lodging in despair. But he had a friend in his landlady, who advised him to take Sir Christopher at his word, and carved the best sow and pigs he could in the time allotted.

With his last guinea he bought a block of pear wood, and by using the utmost diligence finished the work in time, and took it under his apron to the appointed place.

The architect was there, and beckoned the trembling carpenter to approach. Upon inspecting the beautiful work, Sir Christopher said—"I engage you, young man; attend at my office tomorrow."

A few hours after Sir Christopher came to the carver and said,—"Mr. Addison wishes to keep your carving, and requests me to give you ten guineas for it." Then he added, "I fear I did you some injustice, but a great national work is entrusted to me, and it is my solemn duty to mind that no part falls into inefficient hands. Mind and attend me to-morrow."

A Wonderful Fact.

The earth is one of the smaller planets of our system, and seems of little account compared with such giant masses as Jupiter and Saturn. It lost a huge slice of territory when it parted with the moon, faring better however, than the unknown planet between Mars and Jupiter, which was broken up by some great convulsion into many parts, a hundred and twenty of which our busy astronomers have already discovered.

But the earth may some day make up for its great loss, for it has not yet reached its full growth. It is gaining in mass slowly and by small accretions, but, as the old proverb runs, "every little helps." The nebulous matter diffused through space, or compacted into innumerable minute bodies moving round the sun, is constantly gathered by the earth in its annual sweep, and becomes a part of its own material.

Some astronomers compute that a

hundred thousand meteors fall every day upon the earth, while others place the number still higher. Prof. Proctor says, "I have shown by a very moderate computation that the earth increases in mass each year by more than twenty thousand tons. Since she was first-formed, then, she must have increased by millions of tons."—Youths Companion.

Poisonous Soaps.

Mothers and nurses cannot be too careful about the soaps they use on the little ones. But few physicians know that many of the so called skin diseases among children are caused by the use of adulterated soap. An analysis of several of the pretty and perfumed toilet soaps that are sold on the streets showed the presence of soluble glass, ground glass, silex, pipe clay, rotten stone, borax, plaster of Paris, tin crystal, magnesia, pumice stone oatmeal and other substances, which are added to give the soap weight, hardness, toughness or clearness. The common colorings are vermilion, Venetian red and carmine ultramarine blues, yellow and scarlet anilines and burnt umber. Many of the perfuming ingredients, though harmless in themselves, become chemically poisonous by admixture. Adding the dangers from all these to the rancid, diseased, putrid qualities of the grease used, and mothers may well be appalled at the permanent evil these neat looking, delicately scented blocks of toilet soap contain, ready to be released whenever moistened and applied to the baby's body.

The Funny Things We Do.

Have you reflected upon the very many funny things we do, for which we can give no particular reason? How is it that we do not give five cheers, four cheers, two cheers, one cheer? Why is it that we give three cheers and no more?

Why is it that the majority of people use the right hand instead of the left, and cannot help smiling at those who use the latter?

Why is it that a man cannot see a bundle of tooth picks without helping himself to one when he does not need it?

Why is it that a small boy cannot let a thin wasted wasp fly in peace without furiously going for it with his new straw hat; or why is it that the small girl will always insist upon lugging home a kitten that has not even learned to open its eyes?

Why is it that when one asks us the number of days there are in a certain month, we always say to ourselves, "Thirty days has September, April, June and November?"

Why is it that we turn to the right instead of to the left, when the left is far preferable, and if adopted would save many an accident on railroads and highways? The driver always sits upon the right of his vehicle; in turning to the right he is furthest away from the wagon he passes, and unless he is an expert cannot tell how close he comes to the wheels of the man who goes by him; whereas, if he turned to the left side, he could look straight down, see to the fraction of an inch how close he was approaching an obstacle and thus avoid it. The engineer runs upon the right hand side of his cab. The long narrow locomotive, with its sand tower helmy and smoke-stack, is in front of him cutting off his observation. He can see only his own track, while the opposite, save at a distance, is wholly unseen by him. On some roads the reverse is the custom.

Custom, owing to causes we know not of, has established these curious precedents, and from observation and education we unwittingly do thousands of things that are, to say the least funny, and that we cannot explain.

Most persons know what they hate, few what they love.

The Freezing Cure.

By means of freezing, parts may be kept wholly insensible to pain, so that slight surgical operations may be easily performed. When the freezing is long continued the frozen parts may lose their vitality entirely which will cause them to slough away. By this means excrescences, as warts, wens and polypi, fibrous and sebaceous tumors, and even malignant tumors, as cancers, may be successfully removed. Small cancers may sometimes be cured by repeated and long-continued freezing. Their growth may certainly be impeded by this means. A convenient mode of application in cancer of the breast is to suspend from the neck a rubber bag filled with powdered ice, allowing it to lie against the cancerous organ. Freezing may be accomplished by applying a spray of ether, by means of an atomizer, or by a freezing mixture composed of equal parts of pounded ice and salt. Mix quickly, put into a gauze bag, and apply to the part to be frozen. In three to six minutes the skin will become white and glistening, then the bag should be removed. Freezing should not be continued longer than six minutes at a time, as the tissues may be harmed, though usually no harm results from repeated freezing, if some care is used in thawing the frozen part. It should be kept immersed in cold water, or covered by cloths kept cool by frequent wetting with cold water until the natural feeling is restored. Felons may often be cured, especially when they first begin, by freezing two or three times. Lumbago and sciatica, as well as other forms of neuralgia, are some times almost instantly relieved by freezing of the skin above the painful part. We have cured some of the most obstinate cases of sciatica by this means, after other remedies had failed.

Malaria in New England.

A short time ago the key to the mysterious extension of malarial diseases in New England was supposed to have been found in the damming of the streams for manufacturing purposes. Now the Boston Advertiser says that intelligent people living in the districts invaded say that the appearance of malaria in New England dates from the introduction of the cultivation of tobacco on a large scale upon the intervals of the Continent, and that its spread has kept even pace with the extended growing of this crop. The most plausible theory of the introduction and propagation of the aerial poison is this: The tobacco crop is a proverbially exhaustive one. To keep up the productiveness of the soil, fertilizers are freely used. The manure is brought from New York city, mostly in scows, which are unloaded on the banks of the river where the cargo is to be used. All the autumn and winter these heaps of putrid matter are fermenting and breeding disease. The air that comes in contact with these piles of filth is contaminated and rendered unfit for human lungs to inhale, as it is, offensive to the senses.

The most ancient monuments of Mesopotamia and Egypt contain no mention of the horse, while the creature represented in Assyrian monuments had the tail of an ass. The first literary mention of the horse in Egypt belonged to a period of about eighteen centuries before Christ. From that time notice of horses in Egypt were frequent and common.

The cattle and horses in the section of Denison, Texas are suffering from screw worms. The disease has become almost epidemic. Work cattle and milch cows seem to suffer more than others.

Learning without thought is labor lost; thought without learning is perilous.

A Tree with 200 Birds Nests.

An old elm stands near the depot in Fair street, Kingston, N. Y., which is a favorite building place for birds. More than 200 nests have been counted among its branches this season, and the birds fill the old tree with song. It is the admiration of every visitor. Many go to hear the singing of the birds in the morning.

Rich and Ignorant.

It is the fashion among people who have nothing to recommend them but money, to affect artistic and literary tastes, and the consequences are sometimes dreadful. As an example take the following story, which comes to us from one of the large cities. There is a social art club in that city, whose members are supposed to be thoroughly posted on such subjects as architecture, painting, sculpture, belles-lettres, house decorations, lace etc., from their foundation in eternal truth to their uttermost heights of poetic significance. Into this club however, have crept some rich and fashionable people. One of these demanded of a friend, lately,—

"James, what's the meaning of this new word—esthetic?"

After regarding him thoughtfully a few minutes, James replied,—

"Ah really, ah don't know. It's not a new dance, is it?"

"I think not."

"Send William for the dictionary."

William is sent but the dictionary is mislaid and cannot be found. Another member enters, and they appeal to him.

"Frank we are a little bothered about this word—esthetic."

"Don't worry, I—oh, I see! You don't speak it right. The accent should be on the first syllable—esthetic. It means a person who does not believe in God."

Don'ts for the Girls.

Don't run down your lady friends in their absence; it's a mighty mean trait.

Don't flirt.

Don't talk slang.

Don't put on airs.

Don't learn to be cranky.

Don't try to arrest attention.

Don't think it's pretty to be pert.

Don't make a drudge of your mother.

Don't say "no" when you mean "yes."

Don't meddle with other people's beans.

Don't make a fright of yourself to be in the prevailing fashion.

Don't be engaged in picking up chance acquaintance on the street.

Don't look on every young man as a good-natured ice cream freezer.

Don't make up your mind to be sweet to every-body's brother but your own.

Don't marry a man who has no evident way of supporting you. Love and starvation has played out.

Don't loose your heart on a Darwinian specimen who parts his hair in the middle. There are plenty of men who want wives; wait patiently and you will get one.

Don't boast of your ignorance of house work. In the present state of society there is no surer stamp of vulgarity.

Filial Love.

There is not on earth any more lovely sight than unwearied care and attention of children to their parents. Where filial love is in the hearts of children we will answer for all the other virtues. No young man or woman will turn out basely, we sincerely believe, who has parents respected and beloved. A child, affectionate and dutiful, will never bring the gray hairs of his parents to the grave. The wretch that breaks away from wholesome restraint, and disregards the

TERMS FOR ADVERTISING.

One inch in space constitutes a square. Business Cards, five lines or less, \$5 a year. All bills for advertising are collected quarterly.

laws of his country, must have first disobeyed his parents, showing neither love nor respect for them. It is seldom the case that a dutiful son is found in the ranks of vice among the wretched and degraded. Filial love will keep men from sin and crime. There will never come a time while your parents live when you will not be under obligations to them. The older you grow the more need will there be for your assiduous care and attention to their wants. The venerable brow, and the frosty hair speak loudly to the love and compassion of the child. If sickness and infirmity make them at times fretful, bear with them patiently, not forgetting that time ere long may bring you to need the same attention. Filial love will surely never go unrewarded.

Brass Bedsteads.

So much is to be said in favor of brass bedsteads that it is gratifying to know that their manufacture and sale rapidly increases. They are so very handsome in appearance, are so light and so easily moved from one side of the room to the other, and above all they are so free from impurities, as no dust collects upon them, that probably in time they will entirely supersede those of wood. It has taken time to prove that they do not lead to increase of work in the need of constant polish, but a wash has recently been invented which renders the metals impervious to the influence of moisture, and so does away with the principal objection to their universal adoption. Iron bedsteads have also a good deal to recommend them, but are not nearly so handsome as those of brass, while those of cane or rattan, while they are cool and pleasant in summer, have not the cosy, comfortable appearance of a well made bedstead of brass. There is no limit to the variety that the latest fashion allows to coverlids. Beds in handsome houses are covered with quilts of exquisite rose-collor, a pale blue, or cream colored satin embroidered in silver thread, while others again have centres of satin and deep borderings of plush. Expense is the only limit to the expression of individual taste in this direction.

Good Listeners.

As people are generally more anxious to speak than to listen, a good listener is always sure of a welcome. When listening, the attention should never be engrossed by any other ideas but those of the speaker. Another important element is the art of saying the right word in the right place, a difficulty which seems insuperable to many, and which is really greater than appears at first sight. When listening to the cares and troubles of others, it is scarcely gracious, and certainly not comforting, to give a long list of similar grievances. Nor is it polite, when a friend is shown a painting, sculpture, or other work of art, for him to instantly describe a similar thing, only more valuable, that he has seen elsewhere, or possibly has in his own possession.

An Arizonian's Costume.

In ordinary weather he wears a belt with pistols in it. When it grows chilly he puts on another belt with pistols in it, and when it becomes really cold he throws a Winchester rifle over his shoulders.

Everything is utilized nowadays. The clippings of sole leather in New England shoe factories were formerly regarded as worthless, and the smell of their burning was a peculiarity of such towns as Lynn and Salem. These scraps are now stamped into buttons for clothes and fancy tack-heads for upholstery.—Waverly Magazine.

Our Literature.

Our friends at a distance, in the older states, may be led to suppose that, being two hundred miles away from railroad, on the frontier of Texas, among the cow boys, with but three mails a week, we must be destitute of literature and the opportunities for intellectual culture; and some of them might be moved to deplore our isolated, deprived, heathenized condition. Lest sympathy should be wasted on us, we are happy to state that, although deprived of many privileges enjoyed in the centers of civilization, we are not without special advantages. Where ever the U. S. mail bag goes it is possible to have the literature of the world, especially the periodical literature. If people have taste for polite literature they can always find the money necessary to buy it, and the time required to read it. Impossibilities are in the way of those only who lack the disposition of mind.

Few communities, probably, of its size, anywhere, have as large a number of persons of literary taste and culture as this community. The number of these is constantly being augmented. Here are men who have devoted years to the study of science, literature, art, Law, Theology, Medicine, Music; some of whom are known in the great world, from the four quarters of which we are here assembled, as Authors, Musicians, Lawyers, Divines, College Presidents, and men of science.

Though shut out from the older communities of the States, and surrounded by a country so vast and new, it is impossible that these minds should become inactive, or that they should soon, or ever, lose their taste for the mental food to which they have been accustomed.

Strangers coming to our community need not, therefore, be surprised to see some of the boys on our ranges - Cow Boys - ride into town on mail nights - and receive the "Century Magazine," "St. Nicholas," "Harper's Art Journal," and first class reading matter of various kinds; Reviews; books of recent publication, Musical Journals and the like; and packing them on their saddles behind them, with their slickers, gallop away to camp to "make down their beds" - or blankets - and sleep on the open prairie under a clear sky, to breathe God's purest air.

Grande Vista.

The weather is a most pleasing and entertaining topic; one that interferes with no one's political or religious views, and does not arouse the spirit of resentment which is in man-of-fends not the most fastidious taste, and does not wound the feelings of the most sensitive.

It is a natural bridge by which we cross over from the boggs of oppressive, and awkward silence to the plains of delightful discourse, thus giving us the power to bore an attentive listener or a whole community of readers as the case may be.

The discussion of the subjects of State Rights, Probation or Baptism will invariably provoke resistance, not so with our subject of The Weather *Vive le Weather.*

The weather is as good as can be expected when we consider our distance from the weather department. Plenty of rain and warm enough for a Zulu.

Jim Burdick has been in poor health most of the summer and is now almost too sick to joke and when Jim get's too sick to joke its no joking matter, he is "shore" sick.

Mr. Shaw is improving rapidly, and is able to be out and around.

Henry Taylor is cutting and putting up hay for the Ranch. He reports that hay is not plenty on the streams and is weedy. He is now on the Plains for hay I believe.

Mr. and Mrs. Goodnight are expected home in a few days from their trip South.

Al Whitley passed through here on his way from Running Water to Clarendon and reports that the Indians are as thick there as they are here.

Jim Shoup is with the hay outfit. Brother Reed goes round with a grin on his face which reminds one of

an alligator in a dry June. He has just received the Photos. of his wife and babies.

The Egyptian War raises considerable excitement amongst us. Burdick says "Why don't the Government turn the lazy low-down lousy heathens over to the war department. The Interior Department never can do any thing with them."

J. H. Miller is expected to be here to-day to begin the erection of the walls of the Stone house—dimensions 65ft., x 15ft., and 10ft., high.

An ancient poet and philosopher, Artemas Ward, or Horace Greely, I forget which, has said that "Women are a necessary evil, that man cannot get along without them."

When I see the boys "russel" a tub washboard &c., &c., I say to myself that part of the old adage (above) is proven true but probably not all.

Mr. Hall has been entertaining the boys with violin music. Hall can "make her talk."

Wm. Essary and family came to the Ranch yesterday for the first time having been in sight often but never chanced to come in before.

Mozy.

Announcements.

We are authorized to announce H. S. Melyen, Seymour, Baylor Co. as candidate for Representative of the 43rd Rep. District, subject to the action of the Democratic Convention should one be called.

We are authorized to announce J. N. Browning, of Wheeler County as a candidate for Representative of this, the 43rd representative District in the next legislature of Texas.

We are authorized to announce S. W. T. Lanham of Weatherford as a candidate for Congress from the Eleventh District at the coming election.

Mobeetie

MOBEETIE, TEX., AUG. 8, 1882

Everything is lively here this week and court is now in session which brings every one of our friends from the country in to see that justice is meted out to all evil doers, and some of them begin to hide out for greener fields.

Judge Willis and Sheriff Flemming returned Saturday and report having had a good time at the sea side.

A number of distinguished gentlemen are in town from abroad and all express themselves pleased with the Panhandle.

Several herds of cattle have passed lately going farther west.

Clampitt's new house was dedicated last evening, and all passed off pleasantly.

A grand wedding breaks upon the sensational world this week to disturb the monotony of the court. The Bridegroom is taking his honeymoon around town and is enjoying himself hugely—hick-honey-fire—that—skillet—a little lighter.

Q. Z.

Skinny Men.

"Wells' Health Renewer" restores health and vigor, cures Dyspepsia, Impotence, Sexual Debility. \$1.

Mr. McKinney is in town arranging to ship his wool, and move his sheep to Calaban County.

It is a source of regret that Mr. McKinney could not have so arranged as to remain in this part of the country.

"Rough on Rats."

Clears out rats, mice, roaches, flies ants, bed bugs, skunks, chipmunks gophers. 15c. Druggists.

Mr. Martin, who ran the mess wagon and did the cooking for the party who came up with A. R. Carhart's herd of cattle, started on his return trip home on Thursday morning. John Bradford accompanied him. John made but a short stay in Clarendon.

Dyspepsia, the insidious foe to health, Disappears by using Dr. Acker's Dyspepsia Tablets. At Druggists.

J. H. Parks returned from a six weeks trip, on Friday last. He expects to leave again on Monday.

No Whiskey!

BROWN'S IRON BITTERS is one of the very few tonic medicines that are not composed mostly of alcohol or whiskey, thus becoming a fruitful source of intemperance by promoting a desire for rum.

BROWN'S IRON BITTERS is guaranteed to be a non-intoxicating stimulant, and it will, in nearly every case, take the place of all liquor, and at the same time absolutely kill the desire for whiskey and other intoxicating beverages.

Rev. G. W. RICE, editor of the American Christian Review, says of Brown's Iron Bitters:

Cin., O., Nov. 16, 1881. Gents—The foolish wasting of vital force in business, pleasure, and vicious indulgence of our people, makes your preparation a necessity; and if applied, will save hundreds who resort to saloons for temporary recuperation.

BROWN'S IRON BITTERS has been thoroughly tested for dyspepsia, indigestion, biliousness, weakness, debility, overwork, rheumatism, neuralgia, consumption, liver complaints, kidney troubles, &c., and it never fails to render speedy and permanent relief.

NEWMAN'S PURE GOLD BAKING POWDER

Has now been before the public nine years and has been thoroughly tested and pronounced one of the BEST POWDERS in the market. 50,000 families in this country and Canada are now using it.

It is made from Pure Cream Tartar and contains no Alum, no ammonia, no Tartaric Acid, no Terra Alba or any other unhealthy or injurious article. It is not only made from the BEST AND PUREST MATERIALS but is also ACCURATELY COMPOUNDED upon scientific chemical principles and therefore is always UNIFORM and RELIABLE.

Our Flavoring Extracts are also the very best that can possibly be made—use the best vanilla beans and the very best essential oils that can be made.

Try these goods and be convinced of their SUPERIORITY. You will get a valuable list of recipes and a small tin measure with the Baking Powder and other valuable information.

They are for sale by all the reliable merchants and grocers in the country; but in case your merchant does not keep them send your order direct to us, with 50 cents enclosed, and we will send you a pound of the Baking Powder by mail.

HOME NEWS

The flying T Ranch is putting up lots of hay.

Cap. Bartlett, is out on a haying expedition this week.

Dalton has moved into the Wright house.

Prof. Randall is still sick with intermittent fever.

T. W. Morrison and his Nephew are improving.

Mr. Gollather was in town on Wednesday.

Miss Mattie Fry made the News Office a pleasant call Friday evening.

Messrs Burdick and Thompson made a pleasant call this morning

Alvus Thomas has been sick a few days he is better at present.

Wild Turkey are reported quite plenty in the vicinity of McKinney's sheep camp.

J. F. Evans and Co., expected to start their beef herd for Dodge City this week.

Three children of Mr. Fish, who came to town recently, are down with chills.

Gus. Hartman kindly left the necessary funds to remunerate us for a years growth of the News.

The Case Cattle Co., are rounding up their beef and will probably drive them to Dodge City.

J. E. Tomson, of Mr. Goodnight's Ranch was in town to day he left on gray back for the ranch

We heard about Sam Dyer's being under the weather but did not hear about that big watermelon.

Mr. Geo. Smith has been on the sick list this week. We are glad to see him out again however.

Hiram. D. Straight and son have sold out and gone to Mobeetie. They talk of extending their trip to California.

Judge G. A. Brown and A. R. Carhart were out gunning on Thursday evening. Plovers suffered.

A new invoice of ladies' hats, at the Drug Store, just received from New York. Prices reduced.

Parties who have been off pluming lately, report no plums. They seem to have disappeared very suddenly.

Samuel Dyer is quite sick, at Grande Vista Ranch. A. Dyer came to town for medicines for him on Thursday.

James Newman is at work on the roof of the new store. He talks of going south with H. L. Wright, on his return.

Hawkins is in town again. He will go south, soon, and gather up the scattered stock of the stage line and return here.

Bill Ross has just pulled in from Mobeetie, with freight for Van Horn's. He drives a small team of five yoke of cattle.

E. D. Sanxay, for some time book-keeper for Van Horn and Co., at this place, has left the position, and expects to go to Dodge City soon.

Teams from Mobeetie with freight for the White House, Osborn and others, pulled into town on Wednesday of this week.

Al. Gentry is now employed at Van Horn's store. Al. possesses all the qualities for a good clerk, and we wish him success in his new undertaking.

Mr. and Mrs. Goodnight were expected home, at Grande Vista, on Wednesday evening. They have been absent some time.

The Case Cattle Co. rounded up their herd on Tuesday of this week, for the purpose of allowing Wilson Brothers and Thomas to cut out their stray cattle.

Wilson Brothers and Thomas have got through turning over their cattle to Sacre and Richards. There are quite a number of their cattle still out however.

The new store building is progressing finely. The roof is nearly on and it is being painted. Another week or two will see it completed. It will be quite an addition to the town.

It is rumored that another lawyer has decided to settle in our midst. Another one might be needed, in the event of a law suit, as one could not very well take both sides of case. It might bother the Judge.

Mrs. Kowalski and Mrs. Cooper made us a pleasant call Friday evening and investigated, to their satisfaction, the workings of our office and expressed themselves very much pleased with its appearance. Call again Ladies

A surveying party, consisting of several men, left on Wednesday morning, to run the west line of the Carrolton Range, for the fence now under construction. Prof. Combs manages the compass.

James Burdick, black smith at Grande Vista, having been unwell for some time, is now in town for a few days for medical treatment. He expects to return to the ranch in a few days.

We have had several new "typos" on the News this week, Miss Ridgway helped us out on Thursday, Jim Burdick makes a capital hand, he sets up the fast "locals" the one about the fast horse is due to Jim's ingenuity and perseverance.

On Saturday last, as a little daughter of J. C. White was riding on horse-back, she fell from the horse and broke her arm. The fracture was not a serious one, being a diagonal fracture of the radius, or bone of the fore arm, about an inch above the wrist joint. The bone was set by Dr. Carhart and the little girl is doing well.

S. E. Tomlison, the young man with the fractured clavicle, left for home on the Bridle Bit Range, on Tuesday of this week. The fractured bone was so far knit together as to make it safe for him to ride. Mr. Tomlison, though a stranger here when he came, has made many friends, and it is hoped that he may find it in his way to return here and remain among us.

The Sociable.

The second of the series of social entertainments was given at the residence of Mrs. L. H. Carhart, on Wednesday night. It was largely attended, and an interesting time. There were readings, recitations, music, charades, &c., and it was not until a late hour that the company dispersed.

School Meeting.

According to announcement in last week's News, a meeting was held on Wednesday evening, at 4 o'clock, in the school house to select Commissioners for this School Community, Rev. J. B. Cartlich was elected chairman and J. H. Parks secretary.

On motion of J. T. Otey the following persons were nominated to fill the office of commissioners; B. H. White, T. W. Morrison, and J. H. Parks.

J. G. Murdock, James T. Otey and W. D. Kimball were appointed a committee to investigate the matter of a new School House for Clarendon.

The meeting adjourned until Tuesday, Aug.,—at 8 o'clock.

For aged men, women, weak and sickly children, without a rival. Will not cause headache. Brown's Iron Bitters.

The foreman wishes to express his hearty thanks for the beautiful "pipe of peace" presented to him by one of the boys. We will think of Mr. Dyer often when enjoying this token.

On Saturday last, whilst Gus. Hartman was attempting to force a cartridge into his breach-loading rifle, the cartridge exploded, lacerating his right hand in a terrible manner. The pocket knife with which he was attempting to push in the cartridge was torn to pieces, and it is supposed that the cutting of the hand was done mostly with the fragments of the knife.

He did not reach town until Sunday afternoon, being about thirty-five miles out. He was quite sick and faint and scarcely able to ride.

The hand was badly inflamed when he arrived in town, but it was promptly dressed and for two nights was kept under an irrigating apparatus, and the inflammation entirely allayed. The wounds are doing well, with good prospect of speedy recovery.

Fresh Arrivals.

On Saturday evening it was announced that several carriages were in the distance and it was at once decided that it was A. R. Carhart and party. All were on tiptoe, watching carefully to determine positively the correctness of our conjectures. We soon satisfied ourselves that they were the parties we had looked for, for several days. The herd of cattle was left at Worley Lakes, in charge of George W. Bradford, whilst the balance of the party came on to town.

There were in the party Prof. J. H. Combs and wife, of Fort Worth; Rev. W. A. Allen and family; Geo. W. Bradford and wife; John Bradford and several herdsmen, whose names we did not learn. They all found comfortable quarters at the White House, temporarily. Prof. Combs is already house-keeping. Mr. Bradford and family went into their own house, the balance of the party are still at the White House. The trip was a long and tedious one. They were on the road thirty-four days.

A load of buffalo hides arrived in town to day from the Yellow House canyon—but dun gon by.

CARHART & HEALY. A. R. Carhart B. B. Healy Also, Star on right jaw Range on Carrol Creek Donley County Texas. A. R. CARHART Clarendon, Donley Co. Texas.

Stock Notes.

Despite the repeated warnings which shippers have received in regard to thin and rough cattle, a great many such have been here within the past ten days, says the Chicago *Drovers Journal*, and numerous droves have been sold for \$1.00 less than they cost, to say nothing of freight and other charges. Green native cattle are positively not wanted when range cattle can be had. Shippers cannot hope to make anything but losses on them at this time. —*Stock Journal.*

Wire Fences.

Wire fences seem to be a failure in this part of the country. Parties can never tell how long the inclosure will stay up. A rush of cattle from either side can bring it down without a moments warning, and as the cattle are sure to make a rush through the aperture, if not noticed immediately, it takes more horseflesh and ranch-boys to gather up the strays than if they were at large on the range, not counting the cost in building and keeping fences in repair. We think wire fences ought to have a top board above the upper strand; something the animals will see when on a run, to detain them before breaking down the wire, which now they cannot notice until too late. Fences as now are a costly luxury; many cattle and horses get disabled and killed and by the frequent breakages occurring are of no value to keep stock within the inclosure. —*Red River (N.M.) Chronicle.*

Cows Losing Their Cuds.

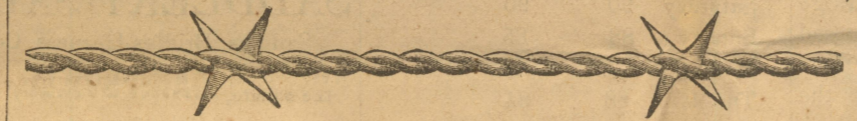

There have been from time to time some very amusing things written about cows "losing their cuds" and many ridiculous remedies have been advised. The first stomach of a cow is used chiefly as a temporary receptacle for the unmasterated food, which is returned to the mouth and thoroughly masticated before passing into the digestive stomach. It is not an uncommon thing for cows to loose their cud, or rather have a temporary suspension of the function of rumination caused by a general derangement of the system. It is not a disease, but rather a symptom of disease, and can be corrected only by going to the root of the evil and restoring the equilibrium of the system. —*Drovers Journal.*

Few sights are more familiar to modern eyes than the paper sack of commerce, and since the war the paper flour sack has not only supplanted the cotton sack, but has largely taken the place of flour barrels. These bags are made from old rope, which is thoroughly cleaned, then ground and otherwise changed in nature until it is mere yellow pulp. This becomes strong paper as it passes through the paper-making machine, and a strip an inch wide has been seen which held together in the rack of the testing machine until the indicator pointed at ninety-five pounds. —*Waverley Magazine.*
