PASSAGE OF H.J.R. 30 MEANS \$1,200 TO LOCAL SCHOOL

Third Wildcat Gets Underway

200, Sunday School Goal Of Baptist Church

The Baptist have set a goal of two hundred in Sunday School next Sunday, the closing day of their revival which is being held by the local pastor, Rev. A. J. Quinn. Rev. Quinn stated that he hoped to have two hundred people present for Sunday School every Sunday, but as next Sunday was the last day of the revival this goal was set especially for that occasion. The revival will close with Sunday night's services. Large crowds have attended the revival thus far and much interest and enthusiasm is being shown in the services. Enthusiasm pointing to the Sunday morning service is running especially high.

REPRESENTATIVES TO

SAN ANTONIO

Several representatives of the local Baptist Church will attend the general convention of Baptists at San Antonio. Rev. Quinn stated yesterday that plans are being made to take two cars from Eldorado. Both Rev. Quinn and Rev. J. L. Ratliff of Eldorado have expressed intentions of attending the convention.

DISTRICT MISSIONARY

EMPLOYED

At a meeting of the District Executive Board at Brownwood Tuesday which Rev. Quinn attended, a missionary from District 16, in which Eldorado is located, was employed. Rev. Julius P. King was chosen to serve as missionary from this district, beginning December 1.

Yoas Funeral Held Today

Mrs. C. A. Yoas, one of the pioneering citizens of Schleicher County and a resident of Brady, Texas for the past several years died at her home in Brady Wednesday. Funeral services will be held in Brady today.

Mrs. Yoas, who before her marriage was Miss Mary E. Espy, with her husband, Mr. C. A. Yoas, moved to Schleicher County more than 45 years ago and settled on a ranch 25 miles west of Eldorado. They moved to Brady in 1916 where Mrs. Yoas has lived since. Mr. Yoas has been dead several years.

Mrs. Yoas is survived by four children: Bird and Henry Yoas, both of Arizona; H. A. Yoas of Brady and Mrs. Lee King of Brady. One sister, Mrs. Kate Knight of Lampasas, Texas and a large number of other relatives. She was the aunt of Miss Ruth Espy of Eldorado. Mrs. Knight is the only surviving member of that immediate Espy family of fourteen children. Mrs. Knight is now 88 years of age. Mrs. Yoas would have been 82 in December.

A large number of Eldorado people, relatives and friends, are attending the funeral today. Among them are Mr. and Mrs. Sam Jones, Mr. and Mrs. T. K. Jones, Mr. and Mrs. Cleve Jones, Mr. and Mrs. Bert Page, Bud and Ed Kerr, Mrs. H. S. Espy and Mrs. R. A. King.

Two Fined In Justice Court

Porter Reese of Menard was fined \$21 for trespassing and Walter Thorne of Menard was fined \$21 for trespassing and \$21 for hunting without a license. The fines were assessed by Judge C. C. Doty in the Justice Court here. The violations were in Schleicher County near McKavett. C. H. Jennings, game warden made the arrests.

Neither of the two preferred to pay his fine and both are being held in the Schleicher County jail.

Water Wells Almost Completed

In Center SW quarter, Section 4

With the deal for Schleicher's newest wildcat completed, a water well, begun on location Monday, is scheduled to be completed this weekend, and it is thought that machinery for drilling will be moved on to the location within the next week or ten days.

Due to a mistake and irregularities of the map, the well which has been reported to be located in block V-28, is, according to Tom Henderson who has a principal interest in the wildcat, located in the center of the southwest quarter of section 4, block A-2, G. H. & S. A. Ry. Co. survey. The well is first reported to be in the northwest quarter of section 4. The well is located on land belonging to Judkins and Spencer of San Antonio. The land is known as the Russell Estate. Other persons interested in the block are Tom Henderson, local ranchman; Mrs. C. C. McBurnett of San Angelo; and R. P. Hinyard, also a Schleicher man.

Actual drilling of the well is due to begin within the immediate future according to those interested in the well. J. D. Wesner, well known around Eldorado, will have charge of the drilling. He is to be assisted by Kempes Kimberlin of San Angelo and Carl Procter of Dallas.

The drilling contract calls for a depth of 6,500 or 200 feet in the Ordovician stratum. The well will be drilled with cable tools, and a steel derrick will be moved to location from the Breckenridge field. A 20 inch hole will be spudded in when the well is started. All of the casing to be used in the well has already been secured.

Centennial Advisory Board Meets

The local Centennial Committee met last night to perfect and further plans for the advancement of Schleicher County in the Texas Centennial of 1936. A few of the representatives of Eldorado and Schleicher County met with the regular committee.

Judge J. A. Whitten, chairman of the Schleicher County committee, urgently requests that every organization invited to participate in work, appoint a representative at the earliest convenience and send this representative's name to Miss Herma Lee Hooker, Secretary of the committee. The clubs and organizations have been rather slow in attending to this work and it is important that they do this in order to get a County wide organization perfected.

Work thus far has been confined to organization and the regular committee is anxious to get a well represented group interested in the work so that Schleicher County will come in for a big play in the Centennial.

Members of the regular committee are Judge J. A. Whitten, Miss Hooker, Mrs. E. C. Hill and Mr. E. W. Brooks.

District Demonstration Agent To Visit Here

Miss Kate Adelle Hill, District Home Demonstration Agent of District 3, will be in Eldorado, Thursday, November 11. She plans to meet with the Home Demonstration Council at the Court House at 2:30 that afternoon, and she requests that all Home Demonstration Club members of the County be present at that meeting.

Miss Hill, formerly a Schleicher County girl, reports that she will bring valuable information with her from her headquarters at College Station, and she is very desirous that all Home Demonstration club women hear her.

Eagles Face Stiff Grind

A gloomy and pessimistic air prevailed in the Eagle Camp this past week as Coach Williamson began drilling his charges for the stiffest competition of the year, the Rock Springs and Ozona games respectively.

That the standard bearers of the Black and Gold of Eldorado High School are in for their real test of the season when they meet Rock Springs November 10 in the Bulldogs own back yard cannot be questioned by their most faithful followers. At that time the Eagles will be arrayed against a formidable high school eleven which ran rough shod over the Menard Yellow Jackets last week to pile up a 45 to 0 score. The Bulldogs out weigh the Eagles to an average of six pounds to a man and they present an eleven with plenty of power and experience.

At the present, the Rock Springs team is being rated by experts as favorites over the Eagles and unless the Eldorado boys show more than they did in that first half of last Saturday's game, they are sure for a real drubbing.

Some followers of the Eagle eleven attribute their dismal showing in the Junction game to an over confident attitude. If that be it, they had better shake off such a feeling in going into the remainder of the schedule.

This week end offers another open date for the Williamsonmen followed by the Rock Springs Game November 10, a tilt with the San Angelo Kittens November 17, the Ozona Game November 24 and the Thanksgiving affair with Sonora.

Play-By-Play Report Of Eldorado-Rock-springs Game

"Arrangements have been completed to give a play by play report on the Rock Springs-Eldorado football game which will be played in Rock Springs on November 10" states Orin Joiner, manager of the local San Angelo Telephone system.

A play by play of the game will be transmitted from the sidelines and will be given out from the Lone Star Theater here. This will come over a leased wire. Subscriptions have been taken up from a number of local fans to pay for leasing the wire.

This service will enable those who will not be able to be at the sidelines to get an exciting story of the game.

Cannery Features Demonstrations

The local cannery has been running full swing the past week. Ten bushels of tomatoes and approximately a thousand cans of meat put out through yesterday.

Mr. Ben Hext, who has charge of the work, states that he is making a test on canning hominy today. The test will include the number of cans per bushel of hominy and the cost to the producer in having the hominy canned. Mr. Hext states that he will be able to give authentic information on this work after today.

The tomatoes canned out around 38 cents to the bushel. "This, said Mr. Hext, entailed a cost of around 34¢ per can to the producer.

Humble No. 1 On Fishing Job

Drilling activities on Humble No. 1 Ike Honig have been halted since last Sunday by a fishing job. Mr. W. T. Dabbs, an official connected with the work, states that this is the first serious fishing job encountered since the drilling procedure began.

The well was at a depth of 5,434 feet at the time of the let down. The formation being shale. Humble No. 1 Ike Honig is located ten feet west of the center line of block M, section 38, G. H. & S. A. Co. survey.

Eagles Win Over Junction

"Greater Methodism" Goal Of West Texas Preachers

Rev. P. S. Connell returned Monday from San Antonio where he attended a five day meet of the West Texas Conference of Southern Methodism which met from October 24 through 28 at the Travis Park Methodist Church. Brother Connell reports that it was the best conference he ever attended. More than 250 preachers and many more laymen attended the meet. Prominent men of Southern Methodism were present and brought inspiring messages.

Brother Connell returned to Eldorado Monday to resume his work here, having been appointed to this field for another year. He reports that the aim of the preachers in the West Texas Conference of Southern Methodism have adopted as their goal for 1935 "Greater Methodism in West Texas."

Schleicher County's Future Is Bright

With ranching well established in Schleicher County, with thousands of acres of good farming land yet to be developed, with bright prospects for the development of the county's mineral resources, especially oil, and with hundreds of other advantages such as healthful climate, good well water, and other essentials, Schleicher County presents itself as a Land of Opportunity—not Golden Opportunity, for it is no such—but real, old, honest-to-goodness opportunity.

A county of some 1300 square miles whose population is less than 3 persons per square mile, Schleicher County lends room for growth. In Schleicher there is room to live, move, and breathe freely—and room to spare. While ranching is fairly well developed, other industries are crying for the hands that will make them thrive. Hundreds of acres of rich, black soil beckon to the plow. Abandoned oil wells ask only to be deepened to pay. Gas wells flow in excess of millions of cubic feet.

Few people have dreamed of Schleicher County with a population of 25,000 people, but Schleicher can support that many and more. Schleicher has an advantage of having a diversity of interests to an extent little enjoyed by the average West Texas county. Ranching is here to stay but other industries in the county are yet in their infancy, yet to be developed.

All Schleicher needs is that her citizens awaken to the opportunities which lie hidden here and begin a program of steady development—a program which will let the rest of the State of Texas know that we are here—not just here, but here, doing things worth while, growing, progressing, realizing a goal, the pinnacle of which is not on a mountain top but somewhere within the stars.

New Scouts In Troop 18

Three new members were added to the Eldorado Boy Scouts in their regular meeting last Friday night. They were Joe E. Hill, Sam E. Jones, Jr. and Gardner McCormick.

Judge J. A. Whitten, chairman of the local scout committee, announces that three star scout badges will be presented to the three advanced scouts of Troop 18 on the evening of November 9. Jack Rape, J. T. Ballew and M. C. Laird are the three who will receive the badges as they have reached the degree in scouting above the first class degree. The local scout committee will make the presentation. Relatives and friends interested in the work of the Boy Scouts are invited to attend.

Holt Urges People To Vote

S. J. R. 13 Is Menace To Local Taxation

The passage of the proposed amendment H. J. R. 30 known as the "University Land Amendment", on November 6, will mean approximately \$1,600 annually in the coffers of Schleicher County schools. R. D. Holt, superintendent of the Eldorado schools points out that there are 90 sections of the University land in Schleicher County untaxed by the state for school purposes. 60 sections of this land are in the Eldorado school district and 30 sections of it lie in the Kaffir district. Basing his figures on the valuation as assessed by the county, Mr. Holt points out that the taxes from the University land would bring approximately \$1,200 annually to the local district and \$400 to the Kaffir district. This money would be added to the right side of the school ledgers without costing the taxpayers of Schleicher County any additional cent. The tax would be borne by the University of Texas.

The University School Land Amendment Association headed by H. G. Secrest of Rankin, Texas, points out that there will be a number of schools aided by the passage of this amendment. The Association reveals that a number of West Texas schools are almost completely surrounded by untaxed University lands. In such cases, the Association points out, schools are unable to operate, receiving little or no tax money. Such situation is unfair, the Association declares, and should be corrected on November 6. The tax coming from University lands to West Texas schools, when and if the proposed amendment passes, will amount to \$12,000 in seventeen counties, Schleicher receiving approximately \$1,600 for her share.

The Association further states that individuals, corporations, and industry bears the brunt of the bill in schools surrounded by University land while the University goes scot free. "9,000 school children in 28 districts are being deprived of proper school facilities," the Amendment Association points out, "while one state institution—school tax free—is piling up millions of dollars in wealth largely produced in these 28 school districts."

(Editor's Note: Of course the people in counties where there is no school land are not interested in this amendment, so it is up to the people of West Texas who have this interest more at heart to pass the amendment; and it will take a 100 per cent vote of interested parties to pass it. Go to the polls Tuesday and vote.)

See Land Amendment, pg. 5

VOTE TUESDAY

Next Tuesday, lest you forget, is General election day, a day whose importance too many of us overlook. Because nomination to the democratic ticket is practically the same as final election in Texas, a large number of voters get the idea that election is all over after the second primary, but some important issues are slated for the balloting Tuesday and every Texan who's loyal to his state and nation should be interested enough to go to the polls and let his loyalty be known. Let's show that Schleicher County is interested in efficient government. Go to the polls and vote Tuesday!

McWHORTER BUILDING RE-ROOFED

Repair work on the McWhorter Building, home of the newly installed Eldorado Motor Company, is nearing the stage of completion. The top of the building has been re-roofed and considerable work has been done on the front of the building. The front will be painted anew and some more work will be done on the inside of the building. Jarvis Benton, who is in partnership with C. W. Galbreath in Eldorado's new Ford Agency,

The Eldorado High School Eagles hurdled another barrier toward the 1934 district championship last Saturday by defeating the strong Junction eleven 13 to 0 in the hardest football game played on the local gridiron this season.

The Williamsonmen put over a couple of touchdowns in the closing quarter of the game after three frames of football which was nerve-wrecking to spectators—say nothing of the players. After Eldorado's great offensive drive in the early minutes of the game which was terminated on the Junction one yard line by a surging forward wall, the game turned into one of those affairs in which anybody might emerge as winner. However, the play during the entire game was either in Junction territory or near midfield. Not once did Coach Bowers' present a scoring threat. They failed to get inside Eldorado's thirty yard stripe during the game.

They made only two first downs against eleven for Eldorado. Both of Junction's first downs came on passes as they were unable to launch a successful running attack against the Eagle forward wall. Junction's lack of an offense, however, was overshadowed by their defense during the first three quarters. Their heavy line and the superlative punting of Holland checked Eldorado boys time after time.

How The Scores Were Made

The first Eldorado score came soon after the fourth quarter got underway. Eldorado entered this period in possession of the ball on their own 44 yard line. From that point they launched an offensive which carried them on down the field for a touchdown on nine consecutive plays. Alexander started the fire works by picking up 4 yards through center. Captain Kerr followed with probably the outstanding play of the game by taking the ball on a double reverse and carrying it to Junction's 28 yard line. Bill Smith went off tackle for 11 yards and a first down. Alexander came back for a two yard gain. Joe Turner Hext went off tackle for 3 yards after which Smith broke through to place the ball on the 5 yard line. Hext gained 4 more yards and Smith went over for the touch-down. Sam Cloud came into the game at this point to try for the extra point from placement but failed.

The other touchdown came near the end of the game after Holland

See Eagles, page 5

INTRA-SQUAD GAME TODAY

Football fans who have been moaning the fact that there would be no game here this week will have the privilege of seeing an intra-squad contest this afternoon as Coach Williamson has decided to divide his team up and sending them into a regulation game.

It is understood that the first string backfield will work with the second string line against the second string backfield and the first string line.

This sort of an exhibition should aid the Eagles in tuning up for next week's hard game with Rock Springs. It will also enable Coach Williamson to get a better line on the actual ability of some of the substitutes.

More Sheep Checks Arrive

The second batch of government checks in payment to Schleicher County ranchers for sheep sold to the government arrived this past week. Officials state that they received 117 checks in this batch which go to 67 sheep producers.

Washington Digest

National Topics Interpreted by William Bruckart

For the first time since the federal reserve system was created a very real rift has developed between the federal reserve board and the federal advisory council...

Creeping In? The advisory council, that group of business leaders which is supposed to be a intermediary between the reserve board and the public...

Men and women of Waukesha, the President of the United States has been insulted by a previous speaker on this program in a serious personal way...

in addition to the council's criticism of the currency policy of the administration, it did not pull its punches with respect to the countless governmental experiments in business...

Henry P. Fletcher, chairman of the Republican national committee, said the other day he anticipated little increase in Republican membership in the house of representatives...

Obviously, the federal reserve board was wrought up when the advisory council did the unusual thing of making public its views...

Whatever may be the attitude of the reserve board, I have found a considerable body of opinion holding that the advisory council was functioning within its own sphere when it made the statement to the board...

It is proof, they say, that whether right or wrong, more voters want their feeling known in the current election than hitherto has been the case...

Says WILL ROGERS

BEVERLY HILLS. This is an article on "Cosmic Rays." You know what a cosmic ray is? Just what I thought...

Well you just as well learn now for you are going to hear a lot about em now any day. You are going to wake up some morning and a big headline will be in the paper and wont be about Sinclair being elected, or "Lizzy Dean gets \$1000 per batter to pitch." It's going to be about cosmic rays.

A cosmic ray, or cosmic rays, as they may be found in the plural or bunches, or they may be located away off by themselves. They are a possible new source of energy, they are about 45 thousand feet up in the air. To bring it down to the understanding of my ray readers, that's about "time miles." Now anything to be nice ladies away dont mean much especially if there is a good road, and the old car is going good, but nine miles straight up, thats about equal to 18 miles on the flat.

Cosmic rays well the fellow that explained it to me wasent any too plain its sort like the Atom. The Atom is a thing that Brisbane always explained to us as it seems to think quite well of it. In fact I think he has recommended some of the stock for sale. He seems to think if they can split the atom, that it will do even better than it is. Well this cosmic ray is a sort of atom splitter.

Now with this good working knowledge of the cosmic ray that I have given you, I will go ahead now and describe the cosmic ray hunters. The ones I run onto was a man and a woman, in fact a wife. Their names are Mr. and Mrs. Jean Piccard.

Well these Piccards that crave these cosmic rays are making preparations to go on this cosmic rodeo. He is a brother of that one that went up over in Switzerland to about 10 miles, so you cant blame this fellow too much as its a family trait. Well I had read about em, and heard about em, but I never had any idea I would ever be so fortunate as to meet em.

I thought I ought to go over and see their machine. It was a sort of a home made contraption. Course part of it is a balloon 175 feet high, with 195 feet diameter. It was just laying there in this hangar, but the thing is an iron basket or gondola. (Thats what they call it.) I crawled into the thing at a hole in the top. I sure wouldnt have stepped into the thing if it had been tied onto that blown up balloon. Well they tried to explain to me all the million and one little traps and instruments. But here was the main thing that got me. When they go up they are just gone. They dont know where they might light. They cant control the direction. They say they can bring her down by letting out enough gas. They expect to perhaps drift a thousand miles.

His wife is going with him. In fact she is sorter the pilot, that is if you can call a person that gets in a balloon and dont know where its going a pilot. I would call em an adventurer. Well she has her balloon license. Otherwise she is an awful smart woman. She tried her best to make me sorter understand something of the nature of the trip, but it was all N.R.A. to me. She is a mighty brave woman to be cosmic ray hunting away up there in the stratosphere. Thats a lining of air that hangs outside our world like a shirt. I dont think they figure on catching any rays. This is purely a pleasure jaunt in the interests of science, and not a commercial venture to capitalize on bringing any back. They are waiting for the right day, and the wind must be blowing the right way at the right height. Nine miles up in an iron ball about 8 feet in diameter with the temperature 65 below zero. Oh yes and you have to have oxygen. They showed me how they regulated the oxygen in this little room, where they remain standing, for they will be too busy working and looking at various gadgets. They are mighty pleasant folks. The hardest part is the takeoff. There is so many things getting the balloon properly filled with hydrogen gas. It was all out there on the aviation field where they will take off from, the same field where Harry (I believe his name was Harry) Brooks looped the loop with me one time. If these folks do take off you neednt look up for em. You cant see them, but they cant see the earth. At nine miles away you couldnt hit the earth with your hat. If they get away with this, this cosmic ray hunting is liable to become quite a sport. This friend of mine out here in Pasadena, Dr. Milliken, had something to do with locating this cosmic ray "Gag." Now that I am all mixed up in this science "Racket" I must get see him and we can exchange ideas on this product. Mabey I can do for it what my good friend Brisbane has done for the atom. This science is quite a study I had no idea there was so much to it.

When Worlds Collide

By EDWIN BALMER and PHILIP WYLE

Copyright by Edwin Balmer & Philip Wyle WNU Service

SYNOPSIS

David Ransdell, noted aviator, arrives at New York from South Africa, having been secretly commissioned at Capetown by Lord Rhondin and Professor Bronson, the astronomer, to deliver a case containing photographic plates. Dr. Cole Hendron, in New York, Tony Drake calls at the Hendrons' apartment. Ransdell arrives and Eve Hendron, with whom Tony is deeply in love, introduces Tony to Ransdell. New York newspapers publish a statement by Hendron and concur in by sixty of the world's greatest scientists. The statement says that Professor Bronson has discovered two planets, which must have broken away from another star or sun and traveled through interstellar space until they came to a region of the heavens which brought them under the attraction of the sun.

CHAPTER II—Continued

"The two bodies have remained associated, approaching us together and at the same speed. Both now show disks which can be measured. It can now be estimated that, when first observed, they had approached within the distance from the sun of the planet Neptune. It must be remembered, however, that they lie in an entirely different direction.

"Since coming under observation, they have moved within the distance of the orbit of the planet Uranus, and are approaching the distance of Saturn.

"Bronson Alpha—which is the name temporarily assigned to the larger of the two new bodies—appears in the telescope similar in size to Uranus. That is, its estimated diameter is something over forty thousand miles. Bronson Beta, which is the smaller of the two bodies, has an estimated diameter of eight thousand miles. It is similar in size, therefore, to the earth.

"Bronson Beta at present is in advance of Alpha in their approach toward the solar system; but they do not move in parallel lines; Beta, which is the smaller, revolves around Alpha so that their positions constantly change.

"They have both come definitely within the sphere of gravitational influence of the sun; but having arrived from interstellar space, their speeds of approach greatly exceed the velocities of our familiar planets in their orbits around the sun.

"Such are the observed phenomena. The following is necessarily highly speculative, but it is offered as a possible explanation of the origin of the two Bronson bodies.

"It has long been supposed that about other stars than ours—for of course our sun is only a star—are other planets like the earth and Mars and Jupiter. It is not presumed that all stars are surrounded by planets; but it has been estimated that probably at least one star in one hundred thousand has developed a planetary system. Among the many billions of stars, there are probably millions of stars with planets. It is always possible that some catastrophe would tear the planets away. It would require nothing more than the approach of another star toward the sun to destroy the gravitational control of the sun over the earth and Venus and Mars and Jupiter and other planets, and to send them all spinning into space on cold and dark careers of their own.

"This world of ours, and Venus and Mars and Jupiter and Saturn, would then wander throughout indefinite ages—some of them perhaps eternally doomed to cold and darkness; others might, after incalculable ages, find another sun.

"It might be assumed, for purposes of explanation of the Bronson bodies, that they once were planets like our earth and Uranus, circling about some life-giving sun. A catastrophe tore them away, together with whatever other planets there might have been, and sent them into the darkness of interstellar space. These two—Bronson Alpha and Bronson Beta—either were associated originally, or else established a gravitational influence upon each other in the journey through space, and probably have traveled together through an incalculable time until they arrived in a region of the heavens which brought them at last under the attraction of the sun. Their previous course, consequently, has been greatly modified by the sun, and as a result, they are now approaching us."

At this point, the prepared statement of Cole Hendron terminated.

Tony Drake was sitting up straight in bed, holding the paper before him and trying, with his left hand and without looking away, to strike a match for the cigarette between his lips. He did not succeed, but he kept on trying while his eyes searched down the column of questions put by the reporters to Doctor Hendron—and his answers.

"What will be the effect of this approach upon the earth?"

"It is impossible yet to tell."

"But there will be effects?"

"Certainly there will be effects."

"How serious?"

Again Cole Hendron refused to answer.

"It is impossible yet to say."

"Will the earth be endangered?"

"Answer: There will undoubtedly be considerable alterations of conditions of life here."

"What sort of alterations?"

"That will be the subject of a later statement," Doctor Hendron replied. "The character and degree of the disturbance which we are to undergo is now the subject of study by a responsible group. We will attempt to

describe the conditions likely to confront all of us on the world as soon as they clearly define themselves.

"When will this supplementary statement be made?"

"As soon as possible."

"Tomorrow?"

"No; by no means as soon as tomorrow."

"Within a week? Within a month?"

"I would say that it might be made within a month."

Tony was on his feet, and in spite of himself, trembling. There was no possible mistaking of the undertone of this astounding announcement. It spelled doom, or some enormous alteration of all conditions of life on the world equivalent to complete disaster.

The League of the Last Days! There was some reference to it in another column, but Tony scarcely caught its coherence. Where was Eve; and what, upon this morning, was she doing? How was she feeling? What was she thinking? Might she, at last, be sleeping?

She had been up all night, and at work assisting her father. The statement had been released at one o'clock in the morning. How much more than this, which had been told, did Eve now know? Plainly, manifestly, the scientists knew more—much, much more, which they dared not yet tell the public. Dared not! That was the fact.

Kyto, who usually effaced himself, did not do so this morning. Kyto, having the untasted coffee for an excuse, called attention to himself and ventured, "Mister, of course, comprehends the news?"

"Yes, Kyto; I understand it—partly, at any rate."

"I may inquire, please, perhaps the significance?"

Tony stared at the little Jap. He had always liked him; but suddenly he was assailed with a surge of fellow feeling for this small brown man trapped like himself on the rim of the world.

"Trapped! That was it. Trapped was the word for this strange feeling."

"Kyto, we're in for something."

"What?"

"Something rather—extensive. Kyto. One thing is sure, we're all in for it together."

"General—destruction?" Kyto asked.

Tony shook his head, and his reply surprised himself. "No; if it were just that, they'd say it—the end of everything. People after all in a way are prepared for that, Kyto. Tony was reasoning to himself as much as talking to Kyto. "No; this can't be just—destruction. It doesn't feel like it, Kyto."

"What else could it be?" questioned the Jap, practically. Tony, having no answer, gulped his coffee; and Kyto had to attend to the phone, which was ringing.

Five minutes after the telephone rang Tony Drake was at the Hendrons'. The place was policed. Men, women and children from Park avenue, from Third and Second avenues, crowded the sidewalks; sound film trucks and photographers obstructed the street. Radio people and reporters refused admittance, picked up what they could from the throng.

Tony, at last, made proper contact with a policeman.

The officer escorted him in. The elevator lifted him high to the penthouse on the roof. No one was about but the servants. Miss Eve, they said, was in the breakfast room; Doctor Hendron still was asleep.

"Hello, Tony! Come in!" Eve rose from the pretty little green table in the gay chintz curtained nook which they called the breakfast room. Her eyes were bright, her face flushed the slightest bit with her excitement. Her hands grasped his tightly. Longing for her leaped in Tony. Down everything else!

He pulled her within his arms and kissed her; and her lips, as they had last night, clung to his. Their hands held to each other a moment more; then Tony stepped back.

She had dressed but for her frock itself; she was in negligee, with her slim lovely arms in loose-lace-decked silk, her white neck and bosom half exposed. He bent and kissed her neck.

"You've breakfasted, Tony?"

"Yes—no. Can I sit with you here? I scarcely dreamed you'd be up, Eve, after your night."

"You've seen the papers? We were through with them before three. That is, Father then absolutely refused to say any more or see anyone else. He went to sleep."

"You didn't?"

"No; I kept thinking—thinking—"

"Of the end of everything, Eve?"

"Part of the time, I did; of course I did; but more of the time of you."

"Of me—last night?"

"I hoped you'd come first thing today. I thought you would. . . . It's funny what difference the formal announcement of it makes. I knew it all last night, Tony. I've known the general truth of it for weeks. But when it was a secret thing—something shared just with my father and with his friends—it wasn't the same as now. One knew it but still didn't admit it, even to one's self. It was theatrical—in one's head, like a dream, not reality. We didn't really do much, Father and I, last night. I mean do much in proving up the facts and figures. Father had them all before from other men. Professor Bron-

son's plates and calculations simply confirmed what really was certain; Father checked them over. Then he gave it out. That's what's made everything so changed."

"Yet you didn't give out everything you know, Eve."

"No, not everything, Tony."

"You know exactly what's going to happen, don't you, Eve? It's going to be doomsday, isn't it?"

"No, Tony—more than doomsday."

"What can be more than that?"

"Dawn after doomsday, Tony. The world is going to be destroyed. Tony, oh, Tony, the world is going to be most thoroughly destroyed; yet some of us will not die! Or we need not die—if we accept the strange challenge that God is casting at us from the skies!"

"The challenge that God casts at us—what challenge? What do you mean?"

"I'll try to tell you, Tony: There are two worlds coasting toward us—two worlds torn, millions of years ago perhaps, from another star. For millions of years, probably they've been wandering, utterly dark and utterly frozen, through space; and now they've found our sun; and they're going to attach themselves to it—at our expense. For they are coming into the solar system on a course which will carry them close—oh, very close indeed, Tony, to the orbit of the earth. They're going to join up at the same distance from the sun as we are. Do you understand?"

In spite of himself, Tony blanched. "They're going to hit the earth, you mean? I thought so."

"They're not going to hit the earth, Tony, the first time around. The first time they circle the sun, they're going to pass us close, to be sure; but

they're going to pass us—both of them. But the second time they pass—well, one of them is going to pass us a second time, too, but the other one isn't. Tony. The smaller one—Bronson Beta, the one about the same size as the earth and, so far as we can tell, very much like the earth—is going to pass us safely; but the big one, Bronson Alpha, is going to take but the world!"

"You know that, Eve?"

"We know it! There must be a margin of error, we know. There may not be a direct head-on collision; Tony; but any sort of encounter—even a glancing blow—would be enough and much more than enough to finish this globe. And an encounter is certain. Every single calculation that has been made shows it."

"You know what an exact thing astronomy is today, Tony. If we have three different observations of a moving body, we can plot its path; and we've hundreds of determinations of these bodies. More than a thousand altogether! We know now what they are; we know their dimensions and the speed with which they are traveling. We know, of course, almost precisely the forces and attractions which will influence them—the gravitational power of the sun. Tony, you remember how precise the forecast was in the eclipse that darkened New England. The astronomers not only foretold to a second when it would begin and end, but they described the blackness and even the sides of the streets in towns that would be in shadow. And their error was less than twenty feet."

"It's the same with these Bronson bodies, Tony. They're falling toward the sun, and their path can be plotted like the path of Newton's apple dropping from the bough. Gravity is the surest and most constant force in all creation. One of those worlds, which is seeking our sun, is going to wipe us out, Tony—if of us, every soul, of us that remains on the world when it collides. But the other world—the world so much like this will pass us close and go on, safe and sound, around the sun again—"

"Tony, do you believe in God?"

"What's that to do with this?"

"So much that that's has got me thinking about God again, Tony. God—the God of our fathers—the God of the Old Testament, Tony; the God who did things and meant something, the God of wrath and vengeance, but the God who also could be merciful to men. For He's sending two world's to us, Tony; not one—not just the one that will destroy us. He's sending the world that may save us, too."

"Save us? What do you mean?"

"That's what the League of the Last Days is working on, Tony—the chance of escape that's offered by the world like ours, which will pass so close and go on. We may transfer to it, Tony,

if we have the will and the skill and the nerve! We could send a rocket to the moon today, if it would do us any good, if any one could possibly live on the moon after he got there. Well, Bronson Beta will pass us closer than the moon. Bronson Beta is the size of the earth, and therefore can have an atmosphere. It is perfectly possible that people—who are able to reach it—can live there.

"It's a world, perhaps very like ours, which has been in immutable cold and darkness for millions of years, probably, and which now will be coming to life again.

"Think of it, Tony! The tremendous, magnificent adventure of making a try for it! It was a world once like ours, circling around some sun. People lived on it; and animals and plants and trees. Evolution had occurred there, too, and progress. Civilization had come. Thousands of years of it, maybe. Tens of thousands of years—perhaps much more than we have yet known. Perhaps, also, much less. It's the purest speculation to guess in what stage that world was when it was torn from its sun and sent spinning into space.

"But in whatever stage it was in, you may be sure it is in exactly that stage now; for when it left its sun, life became extinct. The rivers, the lakes, the seas, the very air, froze and became solid, encasing and keeping everything just as it was, though it wandered through space for ten million years. But as it approaches the sun, the air and then the seas will thaw. The people cannot possibly come to life, nor the animals or birds or other things; but the cities will stand there unchanged, the implements, their homes—all will remain and be uncovered again.

"If this world were not doomed, what an adventure to try for that one, Tony! And a possible adventure—a perfectly possible adventure, with the powers at our disposal today!"

Tony recoiled, after a while, that Balcom had bid him to learn from Hendron, as definitely as possible, the date and nature of the next announcement. How would it affect stocks? Would the Stock Exchange open at all? He remembered, at last, it was a business day; downtown he had duties—contracts to buy and orders to sell stocks. He did not venture to ask to have Hendron awakened to speak to him but, before ten o'clock, he did leave. He walked to the subway.

"Give me five cents for a cup of coffee."

Tony stopped, stared. This panhandler, too, was trapped, with him and Kyto and Eve and all the rest, on the rim of the world which was coming to its end. Did he have an inkling of it? Whether or not, obviously today he must eat. Tony's hand went into his pocket.

"Speculation about the masses assailed him. What did they think this morning? How differently would they do today?"

CHAPTER III

At ten o'clock the gong rang and the stock market opened. There had been no addition to public knowledge in the newspapers. The news-ticker carried, as additional information, only the effect of the announcement on the markets in Europe, which already had been open for hours.

It was plain that the wild eyes of terror looked across the oceans and the land—across rice fields and prairies, out of the smoke of cities everywhere.

The stock market opened promptly at ten. One man dropped dead at his first glance upon the racing ticker.

On the floor of the Exchange itself, there was relative quiet. When the market is most busy, it is most silent. Phones were choked with regular, crowded speech. Boys ran. The men stood and spoke in careful tones at the posts. Millions of shares began to change hands at prices—down. The ticker lagged as never in the wildest days of the boom. And at noon, in patent admission of the obvious necessity, New York followed the example already set by London, Paris and Berlin. The great metal doors boomed shut. There would be no more trading for an indeterminate time. Until "the scientific situation became cleared up."

When Tony hung up the telephone, he thought vaguely that only foresight during the depression had placed his and his mother's funds where they were still comparatively safe in spite of the threat of world cataclysm.

Comparatively safe—what did that mean? What did anything mean, today?

Balcom came into his office; he put his head on Tony's desk and sobbed. Tony opened a drawer, took out a whisky bottle which had reposed in it unopened for a year, and poured a stiff dose into a drinking cup. Balcom swallowed it as if it were milk, took another, and walked out dazedly.

Tony procured his hat and walked out. Every one else was on the street—people in herds and throngs never seen on Wall or Broad street or on this stretch of Broadway, but who now were sucked in by this unparalleled excitement from the East side, the river front, the Bowery and likewise down from upper Fifth and from Park avenues.

All trapped—thought Tony—all trapped together on the rim of the world. Did they know it? Did they feel it?

The deluge of humanity was possessed of a single insatiable passion for papers. But the newspapers told nothing more. Their contents, following the repetition of the announcement of the morning, were of a wholly secondary nature, reflecting only the effect of the statement itself.

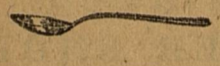

TO BE CONTINUED.

VOLCANOES IN ACTION

The volcanoes which erupted recently in the state of Vera Cruz, Mex., and in Alaska, are in that belt of volcanic activity which engirdles intermittently the huge basin of the Pacific ocean. This ring of volcanoes may be traced, on this side of the Pacific, from Cape Horn to Alaska, while on the other sides the cones are found in Japan, the East Indies, New Zealand, and other islands.

In South America, the Andes are studied with volcanoes, some of which are among the loftiest in the world. In April, 1932, a number of volcanoes roared into activity, terrifying inhabitants for 400 miles and sending dust as far away as New Zealand, 6,000 miles distant. Descazabado, Chico and Planchon in the Andes erupted again in July, and last January Llaima, in southern Chile, poured smoke six miles in the air.

Why Liquid Laxatives Do You No Harm

The dose of a liquid laxative can be measured. The action can thus be regulated to suit individual need. It forms no habit; you need not take a "double dose" a day or two later. Nor will a mild liquid laxative irritate the kidneys.

The right liquid laxative will bring a more natural movement, and with no discomfort at the time, or afterward. The wrong cathartic may often do more harm than good. An approved liquid laxative (one which is most widely used for both adults and children) is Dr. Caldwell's Syrup Pepsin, a prescription. It is perfectly safe. Its laxative action is based on senna—a natural laxative. The bowels will not become dependent on this form of help, as they may do in the case of cathartics containing mineral drugs. Ask your druggist for Dr. Caldwell's Syrup Pepsin.

And There Are Many Hokum is for the easily taken in; but they like it.

Cleaned PLUGS SAVE YOU money!

STOP THE WASTE OF 1 GALLON OF GAS \$4.10 . . . HAVE YOUR SPARK PLUGS CLEANED BY THE AC SPARK PLUG CLEANER

only 5¢ a plug

When your spark plugs are Oxide-Coated, they mis-fire intermittently. This wastes as much as 1 gallon of gas in 10. Ask any Registered AC Dealer, Garage or Service Station to stop this loss of money—by cleaning your spark plugs with the AC Cleaner. Replace badly worn plugs with new ACs.

Delinquencies and Duds "How is your husband behaving?" "Oh, badly enough for a new dress, I think."

NASAL IRRITATION

Relieve the dryness and irritation by applying Mentholatum night and morning.

MENTHOLATUM

Gives COMFORT Daily

WNU—L 44—34

HELP KIDNEYS

If your kidneys function badly and you have a lame, aching back, with attacks of dizziness, burning, scanty or too frequent urination, getting up at night, swollen feet and ankles, rheumatic pains . . . use Doan's Pills. Doan's are especially for poorly functioning kidneys. Millions of boxes are used every year. They are recommended the country over. Ask your neighbor!

DOAN'S PILLS

Mercolized Wax

Keeps Skin Young

Absorb blemishes and discolorations using Mercolized Wax daily as directed. Invisible particles of aged skin are freed and all defects such as blackheads, tan, freckles and large pores disappear. Skin is then beautifully clear, velvety and so soft—face looks years younger. Mercolized Wax brings out your hidden beauty. At all leading druggists.

Powdered Saxolite

Reduces wrinkles and other age-signs. Simply dissolve one ounce Saxolite in half-pint witch hazel and use daily as face lotion.

Sabbath Slumber "How late do you usually sleep Sunday morning?" "It all depends." "Depends on what?" "The length of the sermon."

DRUGS?

Don't make the mistake of giving even a 14-year old boy strong medicines meant for adults.

Boys and girls who have reached their "teens" are not ready to be given powerful drugs!

It is not wise to give laxatives of adult strength to a child, just because you give them less frequently or in less amounts. Many stomach upsets and bowel troubles of growing children can be traced to this single mistake.

Use a liquid laxative containing senna (a natural laxative). California Syrup of Figs has the right amount for children's use, and this rich, fruity syrup does not harm or upset a child's system.

Give that headachy, bilious child a little of this gentle laxative when constipated, and a little less, if dose is repeated until bowels seem to be moving regularly and thoroughly without need of help.

Get the true California Syrup of Figs containing senna and cascara, which will not weaken the bowels or irritate the kidneys. You'll soon have full evidence that it safely relieves constipation in children.

THE "LIQUID TEST." First: select a liquid laxative of the proper strength for children. Second: give the dose suited to the child's age. Third: reduce the dose, if repeated, until the bowels are moving without any help at all.

An ideal laxative for this purpose is the pure California Syrup of Figs, but be sure the word "California" is on the bottle.

Large Numbers "Gort seems to have quite a head for figures, doesn't she?" "I should say so. She says she has the number of numberless admirers."

If you tire easily—

why not reason out the cause of this unnatural condition?

Your first thought may be, "I must eat more." That's not all. You should enjoy what you do eat. Frequently, the blood cells are low . . . and this, perhaps, is what makes you feel weak. If this is your trouble the stomach may not be calling for sufficient food. Zest S.S.S. may be lacking. But what a difference S.S.S. makes when taken just before meals. Just try it and notice how your appetite and digestion improve. S.S.S. stimulates the flow of gastric juices and also supplies the precious mineral elements so necessary in blood-cell and hemo-globin up-building. Do try it. It may be the rainbow you need to brush away present discouragement over your health condition.

Do not be misled by the efforts of a few unethical dealers who may suggest substitutes. You have a right to insist that S.S.S. be supplied you on request. Its long years of preference is your guarantee of satisfaction.

Poor Contest "He's wrestling with his conscience." "Yeah, a featherweight catch."—Kansas City Star.

CREOMULSION

Your own druggist is authorized to cheerfully refund you if you are not satisfied with the spot if you are not relieved by Creomulsion.

BRONCHIAL TROUBLES

WHEN

Samples are advertised ask for them either through the merchant or by mail, and then buy the merchandise, if you like it, from our local merchants.

PROSPERITY

(Editorial)
Margaret Hill

What is prosperity? It is the topic being discussed every day in our country. In nine cases out of ten, "wealth in money" will be given as the answer to that question. The term is associated with gold, valuable property, and assets to increase this money and property. When we speak of a prosperous man we speak of the value of his property and his income. But there are rich men who are not prosperous because prosperity should mean more than financial wealth. It should mean content and happiness, as well as some financial gains.

There are several divisions under which prosperity might be placed. Some of these are physical, mental, and moral prosperity. Each one of these is important. Of course, everyone wishes to be successful, and to be so, one must have the ability to enjoy life. Unhappiness and discontent should never be associated with prosperity; they just do not fit. If prosperity is moved away from the standard of money, everyone is more sure to enjoy it.

FEATURE STORIES WRITTEN IN PRESS CLUB
Margaret Hill

The Press club, under the direction of Mr. Copeland, has been studying the three different kinds of news stories, which are: the news item, the editorial, and the feature story. There seems to be quite a bit of trouble in determining the difference between the editorial and feature story.

At the last meeting each member wrote a feature story. Several subjects were given the club by Mr. Holt. Most of these were items concerning the school and could be made into very good feature stories. It is hoped that this difficult task of writing these stories will be mastered by all members of the Press club soon.

— Eagles' Screams —
ROAD AHEAD OF SENIORS
Lois Whitley

Just at present the Senior class is faced with what is commonly called "financial embarrassment." The "poor dears" are attempting to collect money enough to pay their rings out of the Post office. The attempts so far have not increased the treasury much. For the past four weeks the Seniors have been in a sweat to get the rings in Eldorado, to the extent of worrying Mr. Brooks each day with requests that he look again and see if they had yet arrived. Now since the rings are here they are vaguely worried about what they are going to do about it.

THE YOUNGEST PUPIL IN HIGH SCHOOL

By Jess Ella Johnson

Who is the youngest pupil in High School? This is a question that is often asked. This year the freshman class consists of forty-five or fifty pupils. Out of this number there are six pupils who are just thirteen years of age. Christine Currie is the youngest of these six.

Christine is the daughter of Mrs. Ola Currie who lives in Ozona, Texas. She was born October 13, 1920, in Ozona. At the age of six years she started to school in the Ozona Public School, and attended school graduated out of the seventh grade in May 1934, and was valedictorian of the class. She is continuing to make good grades here. For the first six weeks of school she made three A —'s, and three B-plus's.

We are very proud to have Christine in our school and hope she is able to finish here.

— Eagles' Screams —
BALLOT FROM "RED HOG"

ARKANSAS

Louis Kerr

When the presidential election was held in Red Hog Arkansas in 1932, the natives were just asked to write the name of the man they wanted for president on a sheet of paper and give it to the man who were holding the election. The votes ran as follows:

- Woodrow Wilson 2
- Charles A. Lindberg 6
- Sampson 1
- John D. Rockefeller 12
- George Rogers Clark 9
- Uncle Sam 14
- Robert E. Lee 2
- Tom Mix 4
- Ma Ferguson 5
- Andrew Jackson 6
- Christ 3
- John Paul Jones 3

They never did know who was elected president and still don't.

— Eagles' Screams —

After this "embarrassment" is overcome they will be faced with the joyful holidays (meaning that it will be Christmas before we get our rings) and they will forget for a brief period the trials of classrooms; but immediately after the holidays are over, they resume that "Boy-what-a-life" expression. Mid-term examinations slow up fun very much, (for about a week before and the week after the Seniors have less dates and more appointments with teachers.)

We can suppose the sighs of relief after those examinations, and the fun of Senior parties, banquets, and the Senior play. Next the dreary period of examinations again, but since the teachers are so glad to have them get out of their classes they are tempted to pass them regardless, so they do not fear finals so much. Most Seniors feel that they have a cinch on graduation after they get past mid-terms.

Then Commencement after that? Well—I guess the Seniors will not travel together much longer.

NEW FURNITURE TO BE BOUGHT ON NOVEMBER 8

Inez Cobb

The school board has set the date, November 8, for buying the new furniture and equipment for the new and old school buildings.

The present seats will be taken from the first five grades over to the new building. 125 new desks will be bought.

In the old building the Home Economics department will be down stairs. There will also be new equipment for it and probably a room for a library. Gymnasium equipment and window shades will also be purchased.

Six desks for teachers will go to the new building.

The new furniture will be paid for out of the new building fund.

— Eagles' Screams —

ELDORADO DEBATE CLUB

George Williams

The debate club of Eldorado High School will debate in chapel Wednesday morning November 13, at 10:30 o'clock.

The debating will consist of two teams the boys and girls. The boys team consists of Jim E. Sample, Clayton Trotter and George Williams. The girls' team is composed of Josephine Clayton, Mary Lee Davis and Wilma Nixon.

The boys will have the affirmative and the girls will have the negative.

The members of the debate club are: John E. Rodgers, Joe T. Hext, Edward Butler, Slaton Skinner, Jim Ed. Sample, George Williams, Josephine Clayton, Imogene Evans, Maxine Wilton, Mary Cloud, Charles Ratliff, Clayton Trotter, Oveda Faught, Clements Sauer, Mary Lee Davis.

— Eagles' Screams —

ANGER

"The Owl"

There's a word of haste and of sorrow

Written deep on the pages of life
It causes heart aches for millions,
With poverty, hunger or strife.

It causes men to fight like demons,
And plunder throughout the land.
It has caused them to steal and rob
And to kill their fellow man.

It looses the gambler his gambling roll,
It sinks the ships at seas
But destruction wrought to man alone
Are greater by far than these.

Murder! Murder! screams the headlines
In the papers of the world
And every time this word appears
When the motive is unfurled.

A King was killed in a foreign land
And whispering tongues were heard,
To breathe the word that caused the kill,
And anger was the word.

LAST WEEK'S RESULTS

Eldorado 13, Junction 0.
Rock Springs 45, Menard 0
Fort Stockton 6, Sonora 0 (Non-district)
Ozona Open date

BAILEY GETS RECOGNITION

Buck Bailey, local product, who has built up an enviable reputation as a football coach was rated the third best football scout of the nation in a recent poll of outstanding coaches through the Liberty magazine. Bailey is serving as line coach of Washington State University. Rated above the Eldorado luminary in the Liberty rating were Aubrey Devine and Lou Little. Pop Warner was placed after Bailey.

The Eagles get another rest period this week and then into the hardest games of the year, Rock Springs and Ozona respectively. There will be a two week's intervention, however between the game with the fast stepping Rock Springs crew and the encounter with Ted White's Lions. This intervening period will be used in a tussle with the San Angelo Knights.

Rock Springs Tough

Aside from the fact that the Eldorado-Rock Springs Game of November 10 will be the highlight affair of the season, the outcome will probably spring the first flicker of light on the possible winner of district 17-B. Today, Eldorado, Rock Springs and Ozona have all managed to keep a clean slate. The Eagles, however, have three wins behind in three encounters while Ozona has played but two games and Rock Springs one. Rock Springs is handicapped by having four more district games in a row. Ted White's cohorts are also under a similar handicap as they go into a row of three straight conference games on November 10.

Rock Springs has demonstrated far more offensive power to date than Ozona, and speculation is rife that Coach Ward's eleven is the chief barrier between the Eagles and the Championship. Yet Ozona should not be taken too lightly as Coach White's inexperienced material is fast taking on the aspects of a dangerous football machine. The Lion mentor told this scribe the past week that he was pointing to the Eldorado Game.

Junction Game

Even though the Eagles emerged with a 13 to 0 win over Junction, the game brought a new aspect to the surface. It revealed to the Eagles and to their optimistic followers that the path to the district title is not as rosy as it had loomed early in the season. The Junction game was a breath taking affair for the

ardent admirers of the Black and Gold and until that initial touchdown was scored in the fourth quarter, we had already begun figuring on penetrations for a win.

Wrong Criticism

Word comes from the Texas Longhorn Camp in Austin that Jack Chevigny has passed publicly,—criticism on his Orange and White for permitting the Rice Owls to turn a 9 to 7 defeat into a 20 to 9 victory on a last minute pass. True that criticism should be placed somewhere on this point as Rice was backed down to their own 24 yard line with only 50 seconds to go. It was quite obvious that the Owls would rely on a last minute pass to bring the game out of the fire and yet, the Longhorns held onto their box defense which they had employed during the entire game. Had they have formed a more reliable pass defense, something like a six-two-two-one, the winning touchdown, in all probability, would not have been made. Yet should this criticism rest on the team or the coach. A pass defense is truly one of the fundamentals of the game and a team should be drilled that the employment of such a defense at such a stage is the only logical course. Chevigny should have at least anticipated such action following the play which put Texas in the lead and sent in instructions.

Lumbermen Sponsor Radio Programs

The Wm. Cameron Lumber Company of this city is one of the sponsors of the "Friendly Builders Hour" radio program now being heard from 8:15 to 8:45 o'clock every Tuesday evening over the NBC stations of Texas and Oklahoma. The program is intended to stimulate greater interest in better homes throughout the Southwest, and nearly 1,500 local lumber dealers throughout this area are co-operating in the program. The music is furnished by the 18-piece Friendly Builders Orchestra and the famous Bel Canto Quartette. A sparkling variety of homely philosophy, wit, wisdom, and humor is injected into the program by "The Friendly Carpenter," a character especially for this program by Eric Racey, Dallas advertising man, who built the program and supervises its production. A guest speaker appears on the program from time to time to discuss subjects of interest to home owners. Several civic and business leaders from various parts of the Southwest are to be guest speakers on this program during the next few months.

Alexander News

Mr. and Mrs. W. J. Steward went to Rockwood last Thursday to attend the funeral of Roy Steward's baby. Mrs. Bob Steward returned with them for a short visit here.

Miss Herbert and the pupils of Alexander school put on a Halloween program last Friday night that furnished plenty of laughs. Almost every one in the community was present and there were several visitors from the Reynolds community.

Alexander Home Demonstration club and window display in W. F. Meadors office the past week end. Watch these windows if you want to know whether the Home Demonstration clubs of the county are doing things.

Festus Parson gave a party last Saturday night. Those present had an enjoyable evening.

A young lady arrived in our community Tuesday October 30th, to make her home with Mr. and Mrs. H. A. Belk. H. A. will probably be heard nights singing lullabies.

W. E. Baker who has been confined to his bed for a year, this week has been able to stir about the house and yard more the last six months of the time. He always enjoys having his friends come in to see him.

W. J. Steward and family and Mrs. Bob Steward met Mr. Bob in Christoval Sunday and had lunch on the river. Mr. Bob waited until Monday before leaving for Coleman county.

Amigo.

MRS. NEEDHAM RETURNED HOME

Mrs. Bertie Needham was returned home from Shannon Hospital in San Angelo last Tuesday morning. Mrs. Needham is reported to be resting nicely recently. She was in the hospital for several weeks during which time she was given a blood transfusion.

Among Your Friends

Mrs. J. R. Alexander and sons, Hollis and Joe Riley, of Girvin, Texas visited in Eldorado over the past week end.

Mr. H. H. Casper and wife and Dr. L. Lewis and wife and daughter, Margaret, of San Angelo visited in the home of Judge and Mrs. J. A. Whitten last Sunday afternoon.

Mrs. Georgia Brittan was the guest of Mrs. Elizabeth Heffley over the week end.

Beeler Brown of Ozona was a visitor in Eldorado Saturday.

Mr. and Mrs. J. S. Loyd were visitors in San Angelo last Friday.

Mr. and Mrs. Roy Howland of Hext were visitors here the latter part of last week.

Scenes and Persons in the Current News

1—Regular troops on Governors Island, New York, preparing for duty in the textile strike. 2—Mayor E. Stanley Leatherbury of Plymouth, England, unveiling the "Gateway to the Unknown," a memorial of the sailing of the Pilgrim Fathers from Plymouth. 3—Capt. George Williams, skipper of T. O. M. Sopwith's challenger for the America's Cup, at the wheel of the Endeavour.

LAND AMENDMENT

(Continued From page 1)

In a recent interview, Superintendent Holt pointed out that S. J. R. 13, if passed, is sure to place the brunt of school expense, as well as that of local government, on the shoulders of the local taxpayer. It limits state taxation and state expenditure to \$11.25 per capita, state population, per annum. This means that income taxes, corporation taxes, and other state taxes would be lowered, necessitating an increase in local taxes to take care of the expense of local schools and government. Local taxation is already too burdensome and should not be called upon to bear a greater share of the load. S. J. R. 13 should be defeated.

S. J. R. 15 Should Receive Favorable Attention

James V. Allred, governor-designate of Texas, last week endorsed S. J. R. 16 as a corrective amendment which should be adopted by the people. S. J. R. 16 gives the Legislature the power to classify all real property, equally and uniform, for taxation. Allred points out that this amendment does not endanger the homestead exemption in any way, and that the amendment will allow the taxation of stocks, bonds, and other such property which is now escaping taxation. No Other Amendments Under Fire
The remainder of the proposed amendments to be voted on next Tuesday are drawing no adverse criticism. They are all described as "worthy experiments" which should be adopted.

Editor's Note: (H. J. R. 30, the University Land Amendment should be passed; S. J. R. 10, providing that the taxation of all real property shall be equal and uniform should be passed; S. J. R. 13, providing that the Legislature shall fix a maximum amount of taxes to be collected and expended each biennium be defeated; the rest of the amendments should be passed.)

Mrs. C.E. Knight and Mrs. W. A. Mullett were shopping in San Angelo last Friday.

Mr. and Mrs. B. F. Nolen have moved from their city home to their farm place.

EAGLES

(Continued from page 1)

punt from close formation was blocked and recovered by Captain Kerr on Junction's 29 yard line. Following an incomplete pass, Joe Turner Hext ripped through on an off tackle thrust for a first down on the opposition's 19 yard line. Ardrian McDaniel, who had come into the game for Alexander, duplicated Hext's feat by slipping off tackle for another first down. Hext picked up a couple of yards and McDaniel went over for the touchdown. Cloud was successful this time in converting the extra point from placement. At this juncture, Coach Williamson sent in a flock of substitutes. Eldorado kicked off to Junction on Junction's 20 yard line and it was returned to the Junction 39 yard line. A Junction pass was intercepted by Jack Hext, subbing for brother Joe, as the game ended.

Captain Gentry

For Junction, the defensive play of Captain Wilson Gentry was outstanding along with the splendid punting of Holland. His punts were high and for long distance and very difficult for Hext, Eldorado's safety to handle.

Lady Says She Took CARDUI for Cramps Was Soon Relieved

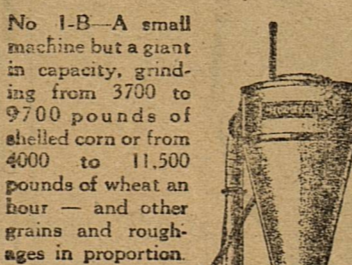

Women who suffer as she did will be interested in the experience of Mrs. Maude Crafton, of Belleville, Ill., who writes: "For several years, I suffered from irregular trouble and cramping. There would be days when I would have to stay in bed. I would get so nervous, I was miserable. My aunt told me to try Cardui. She believed it would build me up, regulate me and help the nervous trouble. I knew after taking half a bottle of Cardui that I was better. I kept on taking Cardui and found it was doing me a world of good. I am in good health, which means a lot to me."
Thousands of women testify Cardui benefited them. If it does not benefit YOU, consult a physician. . . . Price \$1.

McCormick-Deering Hammer Mills Grind Feed at Low Cost

WHEN you belt your tractor to a McCormick-Deering Hammer Mill your own experience will prove that you have a grinding outfit unexcelled in performance and operating economy. Three sizes of McCormick-Deering Hammer Mills are available. Ask us for a demonstration of the size you are interested in.

No. 2 Roughage Mill—A big mill, equipped with roughage self-feeder and hopper for small grain. Roughages and small grain can be ground separately or in combination. An ideal mill for grinding large quantities of feed.

No. 1-B—A small machine but a giant in capacity, grinding from 3700 to 9700 pounds of shelled corn or from 4000 to 11,500 pounds of wheat an hour — and other grains and roughages in proportion.

No. 1-A—An unusually low-priced mill with approximate capacity of from 1500 to 4200 pounds of shelled corn an hour.

THE GREAT COMEBACK

Just recently a streamlined train made a record run from Los Angeles to New York in 55 hours and 55 minutes. It is a significant fact that from Chicago to New York, the speed of the train was slowed to keep within the present schedule. It is another significant fact that the train made better than one mile on the small run of four cents. (This figure of course does not include the depreciation of the machinery, but even figuring that in, the cost of operating the streamlined train is rather low.)

Based upon these facts, and considering that the streamlined train is even more comfortable than the type of train now in use, we predict that the railroads are slated to enjoy the greatest comeback of all industry even though the rail industry. And why not? Railroads have been the couriers of progress in the United States. They have been pioneers, paving the way for civilization's advance. They have been one of the greatest, if not the greatest, factor in the development of this country.

Incidentally, the railroads have bravely borne their share of taxes; and furthermore, they have built their own highways. We could carry the argument much further. The railroads have, when they were able, hired more than their share of men and have paid good wages.

Railroads are an asset to this nation which we cannot and must not willfully lose. They deserve and are worthy of our patronage.

SECRETARY WALLACE SOUNDS MELODIOUS NOTE

"The question before the South", Secretary Wallace told the Associated Press on October 23, "is, shall we put 5,000,000 or 8,000,000 bales of cotton on the foreign market. If we put only 5,000,000 bales annually on the export market, there will be fewer farm laborers and less business for ginners and cotton exporters. Displaced farmers will compete with city dwellers for jobs—I am disappointed that Southern leadership has not been able to lower the tariff walls in the past."

All of which is quiet true, and the alarming thing is, as Peter Molyneux, that able editor of the TEXAS WEEKLY, points out, that we are putting 5,000,000 instead of 8,000,000 bales of cotton on the foreign market. Secretary Wallace's statement is a timely one, but it seems a bit out of step with the present Agricultural Adjustment program.

Secretary Wallace continues his statement, "The really important cause of this reduction is the inability of some nations to obtain dollar exchange. The only way other nations can get dollars with which to buy cotton is to sell goods or services to us. An increase in foreign purchasing power and in foreign ability to buy American cotton can be brought about if this country permits increased exchange of imports for our dollar."

Certainly this is true. And the TEXAS WEEKLY points out that only a reduction in tariff can bring about this "increased exchange on imports" of which Secretary Wallace speaks. There is only one thing which we would add: If we stop to consider this from an unselfish standpoint—not from the cotton standpoint alone—we will readily

see that trade with other countries will not help cotton alone, but will increase all of our export trade—all of it. Why let a little revenue from tariff and a conceited idea that we can live to ourselves like hermits go to our heads ruin our export trade?

Tariff was created for protection, not revenue—and very little protection we need now. Our nationalistic attitude—our tariff barriers—are the chief sources of hatred of other nations for the American nation.

JAPAN'S NATIONALISM

Take a look at Japan. She's gone nationalistic, too, and how many nations, other than Japan, like it. We say that she is a threat to civilization—that she has her eye on the world—and we are possibly not far wrong. Just recently Japan sat down on the oil supplies of Manchuko, and the United States, the Netherlands, and England have protested to no avail. Japan intends to monopolize that oil supply. We don't like Japan's nationalism, but neither do other nations like our nationalism. We say, by our actions, that America is self-sustaining and we can maintain an attitude of being self-contained. And yet we hate Japan for her unbrotherly attitude toward the world.

Russia is sending gold ore to the United States to be smelted. She is doing this in order to increase her buying power with America. Other countries do want to trade with us if we will let them.

EXPENDITURES

Like everyone else, we do not favor lavish and useless expenditures, but on the other hand, too much has been said about the Federal government's excessive expenditures. Since March 1933, the government has spent something like 7-billion dollars with relief of millions of needy and general recovery as its goal. From June 1917 to November 1918, approximately the same length of time as the period now under question, the United States borrowed and spent nearly 40-billion dollars to make the world safe for Democracy. Our expenditures since March 1933 look like a sickly penny when compared to war-time expenditures.

Again, the expenditures since March 1933 look like a sickly penny the same purpose as the great amount of money spent between June, 1917 and November, 1918: "To make the World (especially the United States) safe for Democracy." If something had not been done in March 1933, this nation's very foundations would have been shaken down.

— J. N. DAVIS, PROP. —

Again, the expenditures in 1917-18 helped to lose the lives of 30,000 American Boys, "the youth and flower of the land," while the expenditures in 1933-34 are being used to save the lives of millions of Americans, both boys and girls, men and women. The expenditure of 1933-34 are being used to preserve the nations traditions of democracy from overturn by a dissatisfied and distressed people—not for the destruction of life and property as in 1917-18.

Too much, however, can be said in defense of the present expenditures, and especially can too much be said in defense of the methods of dispensing the money which is now being spent. The point we would like to make is that we would gain more by not grumbling about the excessive expenditures of the Federal Government and by each taking a hand to bring things back to normal as soon as possible so that the expenditures and the methods of expending may be stopped as soon as possible. After all, the motive for the excessive expenditures of the present administration is good, and 7-billion doesn't look nearly so bad as 40-billion (especially when we consider the difference in cause,) but—lots of things can result from a long-continued program of expenditure. Let's join hands in industrial, economic, and social fellowship and bring this country of ours back to normal as soon as possible.

Farmers Making Credit Plans

Nov. 1.—Foresighted farmers in all parts of Texas are anticipating their credit needs for the coming growing season and already are making arrangements with their local production credit associations for loans in 1935, according to reports received by Tully C. Garner, president of the Production Credit Corporation of Houston. The practice of making credit arrangements before the money actually is needed has many advantages to recommend it, Mr. Garner pointed out, and the associations would like as many farmers as possible to make their applications prior to the crop production season.

Before making application to a production credit association, the prospective borrower should analyze his 1935 plans carefully: how many acres are to be planted to cotton, how many to feed and other crops, how much labor will be necessary and how much money will be needed for tractor costs or feed for workstock. After he has done this, he should be able to estimate accurately just how much money will be required and when he will need each of the installments of his loan.

By following this procedure, the applicant has no worry about where operating expenses are coming from or when he will get them. When he is ready to begin operations, his loan has been arranged and all details attended to and all he has to do is ask for his check. By budgeting his loan, the borrower affects interest savings that are sometimes surprising to those who have not used production credit before. Interest, which now is five percent, is paid on each installment only for the time the borrower has use of the money, making a whole season's financing available at very low cost.

Centennial Interest In Capitol City

Austin, Texas, Nov. 1.—(Special Interest of recent weeks regarding Texas' Centennial in 1936 has centered on Austin, the State capital, in anticipation of Legislative action upon proposed State aid of that event, while celebrations are being planned at San Antonio, Houston, Galveston, Brenham, Nacogdoches, Huntsville, Gonzales, Galveston, Dallas and other cities. The seat of Government has been located here since 1845.

Austin was first designated as the State capital when the Texas Congress Jan. 19, 1840, confirmed the selection by the Capital Commission of the "site of the town of Waterloo, on the east bank of the Colorado" and renamed the town "Austin." Several log buildings were erected to serve as administrative offices and legislative halls until the first permanent structure was erected. This was in the administration of President Lamar and March 13, 1842, President Houston, fearing an attack on the capital after the first Mexican raid on San Antonio, ordered the return of the archives to Houston. The following September, by executive order, the capital was moved to Washington-on-the-Brazos.

When the seat of government was returned to Austin in 1845, the first permanent Capitol was erected. It burned Nov. 9, 1881, and a temporary Capitol, located just off the Capitol grounds at the head of Congress avenue, served until the completion of the present structure, which was formally opened May 10, 1888.

Under Spanish regime, the seat of government of what is now Texas was in turn located at Monclova, Mexico; Los Adenas, facing the French outpost of Natchitoches, and now known as Robeline, La., and San Antonio, Texas, which held the honor from 1772 to 1824. After Mexico became independent of Spain, the seat of government went first to Sattillo, Coahuila, and then returned to Monclova, which is in Coahuila.

At San Felipe de Austin, the consultation of 1835, representing the different municipalities of Texas, organized the first provisional Government of Texas there and that place continued as the official headquarters of the revolutionary Government until the convention of March 1, 1836, and it is considered as the first capital of Texas. The convention mentioned met on call of the provisional Government at

Feels a Lot Better When Black-Draught Relieves Constipation

From many states come reports like the following from Mr. W. M. Henderson, of Jasper, Fla.: "I have been taking Theford's Black-Draught twenty years. I take it for constipation that gives me a dull, tired, aching feeling, and I have headache, too. Black-Draught relieves me of this trouble. After a few doses, I feel as good as new. I keep it in my home. I have a big family. When one of us is ailing (from constipation), we take Black-Draught and almost always feel a lot better. It has been worth its weight in gold to my family." Sold in 25¢ packages. "Children like the Syrup."

Guard Against Colds Says Health Officer

Washington-on-the-Brazos March 1 that year, adopted a Declaration of Independence, formed a Constitution and inaugurated a full corps of executive officers March 2, but on March 17, the convention dissolved before the advance of Santa Anna's troops. President Burnet, then for convenience, selected Harrisburg on Bayou as the temporary capital, but no official documents save a few executive orders and proclamations were issued from there. Santa Anna's forces approaching, President Burnet and a part of his cabinet took refuge on Galveston Island. After the Texans' victory in the Battle of San Jacinto, the treaty of Velasco was signed at that place by President Burnet and Santa Anna.

In October, 1836, the first permanent government of the Republic of Texas went into operation at Columbia, the first general election under the Constitution was ordered and the seat of government remained at Columbia for three months. During that time a one-story frame house was the State Capitol.

President Houston on Dec. 13, 1836, approved an Act of Congress, which ordered the seat of government removed to the new town at the head of navigation on Buffalo Bayou, which was Houston. There in a frame structure at the present site of the Rice Hotel the capitol was located from April 16, 1837, until President Lamar and part of his cabinet reached Austin, Oct. 17, 1839.

Austin, Texas, Nov. 1.—While the common cold is no respecter of seasons, increased prevalence is decidedly marked in the winter months. Unfortunately, familiarity with this condition has bred contempt for it. This is plainly indicated by the usual rejoinder, "Oh, I've just got a cold," the inference, of course, being that while a cold is an annoying matter, after all it is an insignificant affliction. This attitude undoubtedly has been the cause of many needless deaths, to say nothing of prolonged and expensive illness," states Dr. John W. Brown, State Health Officer.

"One's resistance to many diseases including colds can be raised by increasing one's vitality by observing the fundamental living rules, namely: plenty of fresh air, good wholesome food, neither too much nor too little, sufficient rest, and the avoidance of habitual over-indulgence of devitalizing stimulants, including tea, coffee, tobacco and alcohol.

"If, however, in spite of ordinary precautions, a cold is contracted, it will pay to consider it seriously. Every cold should be viewed as the possible beginning of a serious illness. That means promptly seeking a physician's advice and explicitly following his directions. If he orders bed, then bed it should be. Incidentally, complete rest is one of the finest ways to overcome a cold in short order."

SOCIETY AND CLUB ACTIVITIES

ELDORADO BRIDGE CLUB

Mrs. J. C. Crosby was hostess to the Eldorado Bridge Club last Thursday with nine members and three guests being present.

Mrs. Ben Hext was winner of high score among the club members while Mrs. W. L. Robertson was high score guest.

Club members present were: Mmes. Lewis Ballew, H. T. Finley, Elizabeth Heffley, Luke Thompson, Ben Hext, Lewis Whitten, Oscar Martin, A. P. Bailey and Mrs. Otis Bule. Guests were Mrs. Van McCormick, Mrs. W. L. Robertson and Mrs. R. T. Crain.

HOME DEMONSTRATION CLUB MEETS

The Town Home Demonstration Club met with Mrs. T. K. Jones Friday, October 26, with nine members and one visitor present. Officers for the coming year were elected. Mrs. Palmer West was elected president; Mrs. T. J. Jones, Vice-president; Mrs. W. N. Ramsay, secretary-treasurer and reporter; and Mrs. John Williams, Recreational Leader.

Mrs. John Williams was elected to serve on the Centennial Board as a representative from this group. The President urged that each member bring a gift for the chest which will be used to defray the expenses of the delegates to the T. A. A. in Dallas.

Cards were signed, listing the three things sponsored by the Demonstration Club the past year. Punch and cake was served by the hostess.

Mrs. George Williams will be hostess to the Club in their next meeting which will be held Nov. 9.

ELDORADO H. D. CLUB TO MEET WITH MRS. WILLIAMS

The Eldorado Home Demonstration Club will meet with Mrs. Geo. Williams Friday, November 9. At this meeting Mrs. Williams will give a demonstration on killing and dressing poultry. She will also demonstrate caponizing. Tufted bedspreads will also be the subject of Mrs. Williams' demonstration.

Invitation is extended to all club members and to all other people who are interested in seeing the demonstrations on caponizing. The meeting will be held at 2:30.

Among Your Friends

Mr. and Mrs. N. P. Wilkinson and Mr. and Mrs. Tom Jones were visitors in San Angelo Tuesday.

Mr. and Mrs. John Williams and Mrs. H. T. Finley spent Tuesday in San Angelo.

Mr. and Mrs. Duke Thompson were visiting and attending business in San Angelo Tuesday.

Mr. and Mrs. Van McCormick made a business trip to San Angelo Wednesday.

JUANITA HOLLAND IN HOSPITAL

Juanita Holland, 14 year old daughter of Mark Holland, was carried to the St. Johns Hospital last Monday for an appendicitis operation.

MRS. SAMMONS ENTERTAINS

Mrs. Bernice J. Sammons entertained the Eldorado Bridge Club Wednesday afternoon with three tables of bridge. Club members present were Mmes. A. P. Bailey, H. T. Finley, Otis Bule, J. W. Hoover, Ben Hext, Luke Thompson, J. W. Lawhon, Elizabeth Heffley, Lewis Whitten, and Oscar Martin. Guests were Mrs. W. L. Robertson of Austin and Miss Mary Ella Miller.

Mrs. A. P. Bailey won high score for the club. Guest favors were presented to Mrs. Robertson and Miss Miller.

PANTRY DEMONSTRATOR PROVIDES ADEQUATE STORAGE SPACE

"I used to keep my canned foods in the kitchen, and lost a lot of them from heat, but have no trouble in keeping them now," said Mrs. Otto Sauer, pantry demonstrator of Reynolds Home Demonstration Club. Mr. and Mrs. Sauer have built a concrete cellar 9 feet by 8 feet by 7 feet. This summer they built a frame house over the cellar, thus giving an added 6 foot height to it. Mrs. Sauer has built four rows of shelves for canned foods across the length of the cellar which has been adequate space for this year, though she plans to build more shelves as needed.

Mrs. Sauer finds that cured meats also keep much nicer in this cellar.

FEDERATED MISSIONARY SOCIETIES MEET

The Federated Missionary Societies of Eldorado met Monday, October 29, at the Presbyterian Church. Mrs. W. E. Eaton presided over the meeting in absence of Mrs. Bert Page, president of the society.

Following the song, "I Go Where You Want Me To Go," Mrs. J. A. Whitten led in prayer. The program was rendered by the Methodist ladies.

Mrs. D. C. Hill was elected Vice-President.

A refreshment plate was served to forty members and guests.

The next meeting of the society will be held on December 31 at the Methodist Church with the Baptist ladies furnishing the program.

RICHEY AND WILLIAMS RETURN FROM HUNT

Mr. A. D. Richey and Mr. J. L. Williams returned the first of the past week from a bear hunt in Old Mexico. Mr. Richey states that they went deep into the interior of the adjoining country, to Sabinas and then to the Bexar Mountains. Even though they failed to find a bear. The hunters report that a good time was had.

BUDDIE HENDERSON HAVING DIFFICULT TIME WITH ARM

Buddie Henderson who received a broken arm in a fall when his horse slipped recently is reported to be having a difficult time with his arm. The break was a bad one and has proven difficult to set. The arm has been set and reset five times.

A daughter, christened Lola Beth, was born to Mr. and Mrs. Lewis Ballew at the Rush, Schuelky, and Wall Hospital in San Angelo on October 26.

CHURCH DIRECTORY

SUNDAY SCHOOL REPORT ANNOUNCEMENTS

Attend Sunday School Next Sunday

Sunday, October 28
267 Eldorado people attended Sunday School last Sunday, a decrease of 41 as compared to the attendance of Sunday, October 21. Last Sunday's attendance represents approximately 22 percent of Eldorado's population. By churches the report for October 28 is:

| | |
|------------------|----|
| Baptist | 95 |
| Methodist | 75 |
| Presbyterian | 57 |
| Church of Christ | 40 |

METHODIST CHURCH

Sunday School 10 a. m.
Morning Service 11 a. m.
Young People's Meeting 7:00 p. m.
Evening Service 7:15 p. m.
Morning subject: "A Good Investment."
Evening Subject: "A Better Knowledge of Jesus."

FIRST BAPTIST CHURCH

Sunday School 9:45 a. m.
Morning Service 11:00 a. m.
Baptist Training Service 6:30
Evening Service 7:30 p. m.
A. J. Quinn, Pastor.
79 attended B. Y. P. U. Sunday night.

CHURCH OF CHRIST

Services each Sunday afternoon at 8:00 p. m. A cordial invitation is extended you to come and worship with us.

CHURCH OF CHRIST

Sunday School 10:00 a. m.
Communion Service 10:45 a. m.
Preaching Every First and Third Sundays.
Midweek services each Wednesday night at 7:30.

PRESBYTERIAN CHURCH

Sunday School at 10:00
Morning Worship at 11:00
At the hour of morning worship the subject of the sermon will be "Where Shall We Testify?"
There will be no evening service in order that we may worship with the congregation of the Baptist Church in the closing service of their revival meeting.
A cordial welcome awaits all at the services of this church.
N. P. Wilkinson, Minister.

MRS. ROBERTSON HONOREE

Mrs. Georgia Brittain recently honored Mrs. W. L. Robertson of Austin with a luncheon at the King Ranch. Guests present at the occasion besides Mrs. Robertson were Mmes. Elizabeth Heffley, Bernice J. Sammons and H. T. Finley.

Mrs. Robertson was the house guest of Mrs. Heffley for the past three weeks. She returned to her home at Austin Thursday.

CHURCH OF CHRIST MAY HAVE PREACHING THREE SUNDAYS

The Eldorado Church of Christ may make arrangements to have preaching three Sundays during each month instead of two. Brother Wendell Carr preaches every first and third Sundays, and Brother J. T. Currey who preached here last Sunday morning and night may be asked to preach every fourth Sunday. Elder Currey of Abilene is in charge of some evangelistic work which is being done by boys enrolled in A. C. C. at Abilene. The boys are making trips through this territory on Sundays and filling pulpits to help make their way through college. Frank Traylor, one of these young men, has been asked to fill the pulpit at Christoval every fourth Sunday. Elder Currey was accompanied to Eldorado last Sunday by his wife.

MRS. HOOVER GIVES HALLOWEEN PARTY

Mrs. L. M. Hoover, entertained for her daughter, Mary, with a Halloween Party Wednesday afternoon from 4 to 6, at the home of Mrs. Joah Campbell. The large upstairs was darkened to midnight darkness and decorated with witches, black cats, bats, and goblins. The guests were met at the door by a dark-robed goblin who conducted them to the dark stairway where many obstacles hindered their progress. Witches and black cats stood at the head of the stairs and a weird ghost with icy hands directed them to the cavern of the cross, inhabited by a snaggle-tooth old witch where they received gifts and fortunes from a boiling kettle over a blazing fire.

After this the guests unmasked and played Halloween games, which were directed by Miss Johnnie Alexander. Refreshments were served to the following: Dorothy Gene Burk, Betty Jo Whitten, Helen Thompson, Lois Carr, Katherine Moore, Anice Green, Kathleen Cross by, Helen and Beula Williams, Mary Jo Rape, Joy Sample, Geraldine and Lillian Sproul, Nora Davis, Azile Wakefield, Hazel Ruth Rodgers, Charlene Chesney, Billie Louise Sprangers, Venita Davis, Lualla Parent and Mary Hoover.

SPOOKS STALK CITY WEDNESDAY NIGHT

From every nook and corner, from all the dark places, the spooks of tradition stalked the streets of Eldorado Wednesday night celebrating the usual Halloween. Pranks of various sorts featured the night's foray by the hideous creatures. None of the pranks were of a serious nature. Sign posts changed places, and a few car owners reported an unusually large number of flats. Very little thievery and destruction was reported.

Large crowds of witches and other species of ghosts crowded the Lone Star Theatre where an unusual but appropriate Halloween show attracted much interest. Everybody enjoyed the evening.

Well, fun is fun, but destruction is destruction. We are proud of Eldorado's ghosts because they are not the destructive kind.

SUCH IS LIFE—The Bill to Uncle

By Charles Sughroe

Makes Impression

Bares Massacre of Old Alaskan Race

Scientists Find Skeletons on Kodiak Island.

Washington.—Evidence of a prehistoric "massacre" on desolate Kodiak Island, Alaska, at a time when it was inhabited by an unknown race of advanced culture, was uncovered this summer by Dr. Ales Hrdlicka, curator of physical anthropology of the Smithsonian Institution, who has just returned to Washington.

This was the sixth expedition of Doctor Hrdlicka to Alaska, and the third summer he has conducted extensive excavations on this site, which in some respects probably represents the highest aboriginal art in North America north of Mexico, although there is as yet practically no clew to the exact identity of the people who developed it or brought it from Asia.

"Nest Burials" Puzzle.

In past years Doctor Hrdlicka has been puzzled by what he terms "nest burials," where a number of skeletons would be found together, of all ages and both sexes and without any of the customary mortuary offerings which the ancient people ordinarily placed in graves.

The clew came with the discovery that many of the skeletons had cracked skulls and other evidences of combat. This is a strong indication that they were not wiped out by some epidemic and justifies a picture of a village massacre from which a few escaped, to return later and bury their dead in heaps.

Assisted by five volunteer college students, Doctor Hrdlicka was able to

make substantial progress this summer in uncovering the remains of the old settlement—apparently the "metropolis" of the bay on which it is located in the days when the island was an important center of population. The site rests on glacial till and in places on a peculiar geologic formation called by Doctor Hrdlicka "butter earth," a gritty, yellow clay, identified by geologists as representing old metamorphosed volcanic ash.

Had Higher Culture.

The unknown people were master craftsmen, especially in the making of beautiful stone lamps and in the carv-

Minnesota Fullback

Sheldon Beise, who played fullback on the Minnesota team last year, is on the job again this season. He is a great blocker and plunger although weighing only 180 pounds, which is light for the Gophers.

ing of ivory. The latter art they carried to the extent of carving individual portraits.

Doctor Hrdlicka added extensively to his collection of skeleton remains and artifacts gathered there in other years; besides what was sent previously there are more than forty boxes of material on the way to the institution. But, he reports, one of the most important results of the excavations this summer was the great family difference found in the many ancient households studied.

All partook of a common culture, yet each family group had its own variation. Some were good lamp carvers, others specialized in other artifacts. The work furnishes a potent illustration of the fallacy of considering a prehistoric culture as almost invariable from individual to individual, or of judging of the whole culture of a people from a localized sample.

Aid in Housing

George H. Buckley of Iowa has been appointed assistant to James A. Moffett, federal housing administrator. He is in charge of all administrative functions.

VICTORIOUS VITALITY

By LEONARD A. BARRETT

The fatalist believes that, regardless of our best efforts, conditions occur according to the decrees of fate. Fruitless are all efforts to alter that decree. We may as well accept the inevitable without argument or explanation. If the decrees of fate are thus final and irrevocable the only alternative is wholehearted acquiescence. But is fatalism the true interpretation of values? Is there not some other explanation of the ills of life? Is a complete surrender to fate the only way out? If fatalism were accepted as a philosophy of life in the business world all progress would be blocked and complete disintegration of economic values would be near at hand.

A man must either drive his work or be driven by it. The latter may produce the fatalist but never the former. Resigning himself to the inevitable, like the prisoner caught with the goods on

him, he sees no way out but suicide, so the fatalist commits mental and spiritual suicide. The man who drives his work, however, substitutes for the law of surrender the law of control.

A sudden calamity will either paralyze us or urge us on to "vaster issues." Much has been written about Theodore Roosevelt's "second wind." He never recognized defeat and the word failure was not in his vocabulary. This same philosophy of life which substitutes control for acquiescence is very greatly needed in the depression experiences through which many people are passing. Acquiescence kills pride, lowers the "morale" and makes one a prey to many of the false social theories rampant today.

Control creates a victorious vitality which refuses to be mastered by outward conditions. Instead of surrendering to fate it uses every unfortunate experience as a means to higher ends. The loss of money may lead to the conviction that "life does not consist in the abundance of one's possessions," and that life should be counted by heart throbs and not dollars in a bank.

Using misfortune for higher ends creates values which we may never have thought existed. An entire new world has been opened up to many who refused these days to surrender to the irony of fate. Victorious vitality may come to everyone who uses misfortune as a "stepping stone to higher things," and who hears, "A deeper voice across the storm."

Paid for Building White House

The cost of erecting the White House was defrayed from the sale of lands donated in 1789-90 by Maryland and Virginia to the United States government.

Sports Ensemble

A two-piece sports ensemble of gray ribbed wool, with two pockets and a smart leather belt. The buttons are of tortoise shell. The bright green scarf is worn twisted at the neck. From Dilkusha.

The Household

By Lydia Le Baron Walker

GLASS is invading the realm of interior decoration. Never before has it taken quite the place it does now, although it has had repeated revivals. Today even the walls of a house may glint from tiny filaments of spun glass introduced into the wall paper together with similar filaments of metals to give a burnished surface. Mirrors have returned in all their glory and are hung to duplicate beautiful portions of rooms, or of boughs, branches and landscapes glimpsed through windows. It is easy to see that the positioning of mirrors is im-

The Table in This Living Room Has Crystal Book Ends, Reflecting Mirror Doily and Glass Paper Cutters, Etc.

portant to bring out the desired reflections for beauty or for impressions of space.

Mirror doily reflections of vases, usually of silver or glass, and flower-filled, give added attraction to tables, since the arrangement is in duplicate. These table mirrors are fascinating dining-table centerpieces as fleeting visions of those seated across the table are often caught, adding to the jollity of an occasion, or permitting swift, unspoken messages to be exchanged. It is true that these are matters apart from the decorative function of the doily mirror which is to reflect the ornamental centerpiece standing on it, but interest is added just the same. Doily mirrors come in round, oval, etc., shapes merely beveled at rims, or with dainty etched decorations on the glass. These mirrors are again in high favor after a lapse of several years.

Collector's Glassware.

Glassware is still in the ascendancy as a collector's hobby. It results to the advantage of interior decoration as many of the pieces take their places on mantelpieces, tables, sideboards, and also on glass shelves in windows. The light shimmers through the transparent crystal white or colored surfaces in a gay and enticing fashion. Many of the pieces can be of genuine practical use, serving as vases, salad bowls, cream pitchers and sugar bowls,

paper weights, but we are not so familiar with glass book ends, paper cutters, and letter holders. Novel they are and handsome, whether in plain solid blocks or molded and chiseled or cut and engraved. Speaking of cut glass, its vogue is becoming more and more in evidence each season.

Cut Glass Comes Back.

Cut glass is returning to favor. It may be said that it has always been in fashion since very light cutting has been in style during the many years when deep cut glass was demode. But the cutting was so very delicate that it made little impression on the surface of the glass, and also but little impression of cut glass in the minds of purchasers. Etched glass has been in higher favor than cut glass.

Two designs are especially featured—pineapple and star cutting. Cut-glass goblets come in all sizes from the very small wine-glass size to the large water goblets. The cutting on this stemware has to be completed on the sides of the glass, for the rims must be polished smooth.

Scarce Advice Combination.

"For advice to do any good," said Uncle Eben, "dar has to be one man smart enough to give it and another smart enough to take it; which is a scarce combination."

"Robbie" Now a Kentucky Colonel

Frances M. Robinson, better known as "Robbie," who has been the very active executive secretary of Gen. Hugh S. Johnson during his regime as NRA administrator, is now a real Kentucky colonel. Here she is seen examining the commission bestowed on her by Governor LaFoon.

PATTERN 9040
This frock has been designed upon the principle that one should always leave a good impression behind one. Look at the little sketch of the lady walking away. Hasn't she saved the prettiest part of her frock to show us last? See how clearly the ends of the combination sleeves and yoke knot at the neck! And don't you like the bow at the waistline? It is a divine little frock in plaid or flowered fabric, but the woman who never wears a fancy fabric can make it up in a plain one and be delighted

with it. And the making is surprisingly easy.

Pattern 9040 may be ordered only in sizes 14, 16, 18, 20, 22, 24, 26, 28, 30 and 32. Size 16 requires 3 3/4 yards 36-inch fabric.

Send FIFTEEN CENTS in coins or stamps (coins preferred) for this pattern. Be sure to write plainly your NAME, ADDRESS, the STYLE NUMBER and SIZE.

Complete, diagrammed, sew chart included.

Send your order to Sewing Circle Pattern Department, 232 West Eleventh street, New York.

Smiles

BAD BUSINESS

Charitable Lady—Here, my poor fellow, is a quarter for you. It must be terrible to be lame, but I think it must be worse to be blind.

Paraphraser—You're right, ma'am. When I was blind, people was always handin' me counterfeit money.

—Pathfinder Magazine.

Be Fair!

"I am going to publish a volume of my poems, and do it under the name of John Smith."

"Well, that wouldn't be quite fair."

"Why not?"

"Just think of the thousands of innocent men who will be suspected."

The Injustice of It

All through dinner Percy sat so silent that his parents at last began to wonder what was troubling him.

"Pa," he said at last, "do school teachers get paid?"

"Of course they do, sonny," replied father.

"Then it's not fair," burst out the small boy, indignantly. "Why should the teachers get paid when us kids do all the work?"

Child Training, Old and New

Modern Methods Conceded to Have Many Points of Advantage; "Lectures" Altogether Beyond the Understanding of Little Ones.

Sara and Mrs. Daugherty were talking. Sara was engaged to be married, and Mrs. Daugherty, her aunt, was performing a "fast duty" by installments—first to find giving her carefully thought out advice. Today it had to do with one phase of "The Right Way to Raise Children," namely, "The Right Way to Talk to Your Children."

"It seems strange to me," said Sara, "that so many parents of today try to teach their children by old-fashioned methods."

"Perhaps, because they realize that the old people had the best ideas on child training," said her aunt with finality. "Ever since your dear mother died, and your father gave you to me to take care of, I have tried to teach you in accordance with the way my mother taught me. But it was too late. You were spoiled. I could not make (and the one word emphasized was 'make') you see right and wrong in their light. I feel that I have failed in the task your father gave me, but nevertheless, I have not altered my ideas in the least."

"Yes, perhaps I was wrong many times, Aunt," agreed Sara. But you see, my mother was strictly modern in her ways, and it was only natural that I became modern also. However, I see no fault in being modern. If I ever have children I shall bring them up according to modern ideas. We have progressed along other lines, why can't we progress in the manner of educating children at home? I believe in giving a child a general conception of right and wrong, and then encouraging him to work out each individual problem. I most certainly do not believe in purposely letting him make a mistake and then lecturing him or giving him a whipping."

"Just what do you mean by 'lecturing' Sara?" inquired her aunt.

This demanded a reply, so Sara answered frankly. "You know, perhaps, that to very young people a lecture seems to consist of lengthy expositions, discussions and eloquent phrases—at least, those are the grown-up terms for what the child thinks of it. It seems to him to have no real conciseness, humor, frankness, honesty, pointedness or clarity. Lectures really are for the older, the more advanced people, are they not? They are usually so far beyond the child's understanding that he cannot grasp their meaning, however clear it may seem to the adult. So, of course, he shows little interest and receives little benefit. If we really want to help children, I think we should talk with them, not at them."

"I begin to understand your point of view," said Mrs. Daugherty. "You think I often lectured you instead of talking with you. I know, now, why you didn't want to be bothered with your old 'Aunt' and her silly talks

—the talks were lectures. But I hope you realize that everything I said was intended for your benefit."

"I realize that, Aunt. This realization is a revelation to both of us, I believe."

"Now, to continue our lesson—let me see if I can state your idea clearly," continued her aunt. "The friendly talk in the majority of cases, is the best way to correct children and to give them advice. And, in addition, you should have some humor, although the humor should be in a subtle explanation and fact. It must also be concise, frank, sincere, straightforward, honest and clear. It must not be about the child, but to him—a very important point to remember when talking to your children. If I understand you correctly, you mean that it is exactly what I mean, Aunt, but may we change talking to your children to 'talking with your children'? It should be, I think, a conversation—a friendly chat. The confidential talk with a child is good; to lecture him is harmful."

"The more I think about it, Sara, the more I realize that your ideas are correct. It is too late to practice them on my niece, but I hope you will stick to them and give advice to any children who are ever in your care."

"I will," was Sara's hurried reply, for the doorbell had just rung and she was expecting her fiancé.

Asbestos a Necessity in Auto Manufacturing

The United States is the world's largest source of manufactured asbestos products, but it is one of the smallest producers of raw asbestos. "Asbestos, as the consumer sees it, often resembles a textile because it can be twisted into cord and woven into fabric, but it is a mineral, nevertheless, which can be mined in much the same manner as coal and iron," says a bulletin from the Washington headquarters of the National Geographic society.

"Asbestos was used by the ancients. They discovered that it would not burn, so they used it for lamp wicks. When it was discovered that the mineral could be made into 'yarn' and woven, it acquired numerous uses.

"Today motorists use more asbestos than any other group of consumers. Asbestos-faced automobile clutches help to put motor cars into motion, and asbestos brake linings stop them. If all the brake linings produced in the United States in a year were made into a continuous ribbon it would span the country between New York and San Francisco about ten times.

Only experienced diptheria does not come in waves any more, as influenza does. It nevertheless bobs up continually. Diptheria is the second greatest cause of death among children from five to fourteen years of age in the state of Illinois. It is led only by accidents. In Illinois in 1930 there were 545 deaths from diptheria. That was 545 deaths too many. The same condition holds true practically for other states in the north temperate zone, for diptheria is essentially a cold climate disease.

Diptheria is a treacherous disease. It is what physicians call a toxoid disease, that is, the diptheria germ, as well as doing its own particular damage, develops a poison that goes through the system, and as a result, even though the child recovers, damage may be done to the heart or the kidneys, and in later life the victim becomes a semi-invalid, or is otherwise handicapped. Children weakened by scarlet fever or measles are particularly liable to diptheria if exposed to it.

The greatest number of cases occur among children from five to seven years of age, at the time they are beginning school and coming in contact with more people.

Diptheria germs enter the body by the nose or throat and leave in the discharge from the nose or throat. Hence the person caring for a diptheria case should be very careful in the handling of these discharges, and in the handling of anything touched by the patient's hands. Milk, if touched by infected hands, can become infected and transmit the disease. A patient should not be considered safe to mingle with others until two cultures from both the throat and nose are declared free from germs by a competent laboratory. Certain individuals, immune to the disease themselves, can have germs in virulent form in the lining of their noses and throats, and can transmit these germs to susceptible persons. In other words, they are carriers. Diptheria germs are not killed by freezing, so that ice cream can transmit them; but they are killed by heat.

Different persons vary greatly in their susceptibility to diptheria. Some have a natural antitoxin in their blood, and will not contract diptheria under any circumstance. But others can get a second case within a few weeks after recovering from a first attack, so it is not safe to assume, without a test, that an attack of diptheria will give immunity.

But every single person can be made immune to diptheria. By the use of the Schick test, a doctor can tell whether antitoxin is present or absent in the blood of an individual.

If it is present, then that person will not contract diptheria, even when exposed to it. If the Schick reaction is positive, then an injection of toxin-antitoxin given once a week for three weeks, will immunize the person against diptheria. The toxin-antitoxin works slowly, however, and it may be eight to twelve weeks before immunity is complete.

In case a child who gives a positive Schick test is exposed to diptheria, that child should be kept under frequent observation by a physician. Diptheria can be an insidious disease. A child can have it for several days before the characteristic sore throat becomes painful; enough that the child seems really sick. It is much better that the parents of a susceptible child be overly suspicious when diptheria is about than to be wrothy free.

The period of incubation for diptheria is from two to seven days, usually two days. If for several days, the physician should not delay a moment in the administering of antitoxin, so as to minimize as much as possible the toxin development of the disease. Speed has a meaning in diptheria.

If there were a law that every child on his third birthday should be made immune to diptheria, we could stamp out this dread disease in a very few years.

Observes Bunker Hill Day
Boston is the only place in the country that celebrates Bunker Hill day, although it is an important date in history.

Let Our Motto Be
GOOD HEALTH
BY DR. LLOYD ARNOLD
Professor of Bacteriology and Preventive Medicine, University of Illinois,
College of Medicine.

DIPHTHERIA CAN AND SHOULD BE WIRED OUT

Every death from diptheria today is needless death.

We who have to do with preventive medicine wish every community would rise up and say: 'Every person within our boundaries is made immune to diptheria!'

Indeed the most radical health officers would like to make every diptheria death unnecessary.

As if it were a case of murder, and they would bring to trial the parents, or the child, or whoever it was who let the child go too long before antitoxin was administered. If these radical officials could have their way, they would make it a criminal offense even for anyone to get diptheria. Because diptheria is a disease we could stamp out completely in this country in the space of a few years if every one would do his part.

Diptheria is no longer a spectacular disease in the minds of the public. It would be well if it were. Older persons can remember when epidemics of diptheria were feared. Cases of "black diptheria" put dread in everyone's heart.

But even though diptheria does not come in waves any more, as influenza does, it nevertheless bobs up continually. Diptheria is the second greatest cause of death among children from five to fourteen years of age in the state of Illinois. It is led only by accidents. In Illinois in 1930 there were 545 deaths from diptheria. That was 545 deaths too many. The same condition holds true practically for other states in the north temperate zone, for diptheria is essentially a cold climate disease.

Diptheria is a treacherous disease. It is what physicians call a toxoid disease, that is, the diptheria germ, as well as doing its own particular damage, develops a poison that goes through the system, and as a result, even though the child recovers, damage may be done to the heart or the kidneys, and in later life the victim becomes a semi-invalid, or is otherwise handicapped. Children weakened by scarlet fever or measles are particularly liable to diptheria if exposed to it.

The greatest number of cases occur among children from five to seven years of age, at the time they are beginning school and coming in contact with more people.

Diptheria germs enter the body by the nose or throat and leave in the discharge from the nose or throat. Hence the person caring for a diptheria case should be very careful in the handling of these discharges, and in the handling of anything touched by the patient's hands. Milk, if touched by infected hands, can become infected and transmit the disease. A patient should not be considered safe to mingle with others until two cultures from both the throat and nose are declared free from germs by a competent laboratory. Certain individuals, immune to the disease themselves, can have germs in virulent form in the lining of their noses and throats, and can transmit these germs to susceptible persons. In other words, they are carriers. Diptheria germs are not killed by freezing, so that ice cream can transmit them; but they are killed by heat.

Different persons vary greatly in their susceptibility to diptheria. Some have a natural antitoxin in their blood, and will not contract diptheria under any circumstance. But others can get a second case within a few weeks after recovering from a first attack, so it is not safe to assume, without a test, that an attack of diptheria will give immunity.

But every single person can be made immune to diptheria. By the use of the Schick test, a doctor can tell whether antitoxin is present or absent in the blood of an individual.

If it is present, then that person will not contract diptheria, even when exposed to it. If the Schick reaction is positive, then an injection of toxin-antitoxin given once a week for three weeks, will immunize the person against diptheria. The toxin-antitoxin works slowly, however, and it may be eight to twelve weeks before immunity is complete.

In case a child who gives a positive Schick test is exposed to diptheria, that child should be kept under frequent observation by a physician. Diptheria can be an insidious disease. A child can have it for several days before the characteristic sore throat becomes painful; enough that the child seems really sick. It is much better that the parents of a susceptible child be overly suspicious when diptheria is about than to be wrothy free.

The period of incubation for diptheria is from two to seven days, usually two days. If for several days, the physician should not delay a moment in the administering of antitoxin, so as to minimize as much as possible the toxin development of the disease. Speed has a meaning in diptheria.

If there were a law that every child on his third birthday should be made immune to diptheria, we could stamp out this dread disease in a very few years.

HOW TO SHOOT
By Rob Nichols
Shooting Editor, Field and Stream

It is hard to believe that you must shoot ahead of flying or running targets in order to hit them. He reasons that the speed of the shotgun charge is so fast that one ought to be able to aim dead on the target and hit it. But the fact of the matter is—you simply can't. Actually, the speed of the shotgun charge is not so very fast. It is only about one-third the speed of the modern high-power rifle bullet. In skeet shooting I can frequently hear the shot charge strike the clay target after the report of the gun. Yet the speed of the shot charge is only part of the story.

In America shooting ahead of your target is called leading it. Without intending to pun, this term is actually misleading. Leading a target implies aiming out in front of the target and swinging along in this position until you judge you are far enough ahead of the target before firing. This is wrong. The right way to do it is to swing on the target from behind it, swing on past it—that is, ahead of it—and shoot after you have passed it. But make up your mind to shoot instantly as you swing ahead of the target. Instead of calling it "leading," the English gunners refer to this as "forward allowance." A more readily understood term, I think.

"Forward allowance" is absolutely necessary, not so much because it takes the shot charge a certain fraction of a second to travel 20, 30, or 40 yards—although this time must be taken into account—but mostly because it also takes time for your eye to register the impression of the target, for your eye to tell your brain to pull, for your trigger finger to snap home, for the hammer to fall, for the primer to explode the powder charge and send the shot hurtling on its way. All this takes time. Very little, to be sure. But remember that the target isn't standing still either. The target may be traveling anywhere from 30 to 90 feet a second, depending on whether it's a rabbit or a canvasback duck. And your shot charge must start towards a point that is ahead of the moving target and in its path.

Only experience will teach you where this point is. No other shooter can tell you exactly. No two shooters function exactly alike in their muscular and nervous reactions. On the skeet field, to the best of my knowledge I believe I shoot at a point about 3 feet ahead of my targets on the crossing shots, and possibly only 2 feet or less on the quartering shots. Just as a tip to you, I will hazard the guess that at least 80 per cent of the targets missed in skeet are shot behind—too far behind.

On a straightaway running rabbit, shoot under him. Shoot 6 inches under his hopping white tail and you'll tumble him every shot. Try a shot on the surface of a pond to see the reason for this. You'll notice that the shot charge strikes the water in a 10-yard long pattern. If you shoot just slightly under your straightaway rabbit you can't miss. On a rabbit running across your line of fire, again shoot just a little low and at a point about 3 or 4 feet ahead of him, depending on how far he is away from you. Remember that the longer the range on any game, the farther ahead you shoot. And the faster the slight of any game, the farther ahead you shoot. On a famous Long Island ducking ground there is an old saying that "if 10 feet seem too much lead, try 20." Which in plain language only means that we seldom miss our game by shooting too far ahead of it. Invariably we miss the target by shooting behind it.

Good shots who are at all conscious of their movements in gun pointing all agree that the best way to swing on a moving target is to come from behind the target, and then at the instant the gun swings past the target to let 'er go. In fact, that last bit of swing past the target, and the trigger pull itself, happen at almost the same instant. Come from behind—swing past—bang! Never stop the swing of your gun. Follow through. To stop your gun as you pull trigger is a fatal mistake—even a hair-line instant pause means that your target has caught up with and passed your forward allowance, and your shot charge goes behind for another miss!

Find Two Sets of Forces
Cause Bands of Jupiter
Study of the bands and spots of the planet Jupiter has convinced scientists that the changes in them are caused by two sets of forces—the tidal forces of Jupiter's moons and the changes in the intensity of sunlight. These solar changes also control earthly weather so astronomers are now studying them to determine if weather on earth can be forecast by the changes in the bands and spots on the distant planet.

Looking at Jupiter through a telescope, light and dark bands of a brown or reddish color may be seen. Previous to 1926 these stripes were simple, thin bands very similar to stripes painted on a rubber ball but in two years' time they changed, and after 1928 they appeared as irregular dark bands and had many isolated dark spots.

Now these bands appear to be changing back the way they were.

PATCHWORK QUILTS AND QUILTING

By GRANDMOTHER CLARK

The "Double Wedding Ring" shown below is the most popular quilt known. Its name is attributed to the following story:

Following the Civil war quilt making was very popular. Grandma had in her collection a quilt she was saving for her grandchild's wedding. Jane's fiance, who had been wounded in the battle of Antietam in 1862, spent many years in the hospital, but

finally returned home and the wedding was planned. "Grandma," said Jane, "we will not have our wedding rings until later." Grandma, however, solved the problem. "My child, I'll furnish the rings and we will call it the Double Wedding Ring."

In those days making of quilts depended on materials that could be found in the home, and also the artistic ability of the maker. Cutting patches accurately and drawing neat designs for quilting were important steps in making a good-looking quilt. Today, with the many helps for quilt makers, thousands of quilts are made in much shorter time than in Colonial days. Here are some modern ways that will make work easy and produce quilts that you will be proud of.

Books of instruction illustrated with instructions and cutting diagrams. Book No. 20 with 30 quilts. Book No. 21 with 37 quilts and book

Widespread Sunday School
More than 1,000 children in remote parts of New South Wales are being given Sunday school lessons by post, says the Montreal Herald.

Many of them live in districts where there is no other form of religious instruction. The school also has a few pupils in Victoria, Queensland, western Australia and Fiji. Each pupil receives every month an illustrated "magazine" containing weekly lessons and questions. Answers are sent to headquarters, where the child's progress is recorded.

No. 23 with 33 quilts. These are 15c each, two for 25c, or three for 35c. Package No. 30 contains 20 fiber cut-outs for cutting patches accurately—25c. Package No. 50—assorted cuttings for quilt patches, approximately sufficient for small quilt—35c. Package No. 32 with 21 perforated patterns for quilting with powder—35c. Any of these wonderful helps will be mailed to you upon receipt of your order with cash enclosed.

Enclose stamped addressed envelope for reply, when writing for information. ADDRESS—HOME CRAFT CO.—Dept. D—Nineteenth and St. Louis avenues—St. Louis, Mo.

Private Baths for Pigs
Because of the success in giving luxury accommodations to cows, pig owners of Holland have started a movement for better quarters for porkers. Dirty sties are definitely out and many clean ones will have special private baths, which will be warmed in winter.—Detroit News.

Now Science Explains Why So Many People Past 40

Feel That They're Slipping Losing Their "Grip" on Things

Many people found 40 think they're "growing old." They feel tired a lot . . . "weak." Have headaches, dizziness, stomach upsets.

Well, scientists say the cause of all this, in a great many cases, is simply an acid condition of the stomach. Nothing more.

All you have to do is neutralize the excess stomach acidity.

When you have one of these acid stomach upsets, take Phillips' Milk of Magnesia after meals and before going to bed. That's all!

Try this. Soon you'll feel like another person! Take either the familiar liquid "PHILLIPS" or the convenient new Phillips' Milk of Magnesia Tablets.

ALSO IN TABLET FORM: Phillips' Milk of Magnesia Tablets are now on sale at all drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of Genuine Phillips' Milk of Magnesia.

PHILLIPS' Milk of Magnesia

NO POINT NOW TO BUYING UNKNOWN ASPIRIN TABLETS!

Big Price Cut on Genuine Bayer Aspirin!

POCKET TINS OF 12 NOW **15c** PAY NO MORE

ON SALE AT NEW LOW PRICES AT ALL DRUG STORES

NOW—Pay Less and Get Real BAYER Aspirin!

There's no longer any point to accepting other aspirin tablets, in place of the Genuine BAYER article, in order to save a few cents.

We've reduced the price of Genuine Bayer Aspirin to a level that makes it unnecessary for anyone to deny himself the speedy action and reliability of real Bayer Tablets.

Millions of people, have long been glad to pay a higher price to enjoy the fast relief from headaches, neuralgia and neuritis pain for which Bayer Aspirin is famed. Now everybody can enjoy its full benefits without thought of price.

Only 15c Now for 12
25c For Two Full Doses

Remember this next time you go to buy aspirin. You can now actually pay less and get Genuine Bayer Aspirin. So never ask for it by the name "aspirin" alone; but always say "BAYER ASPIRIN" when you buy.

On sale now at new low prices—including the 100 tablet bottles, which have again been lowered in price—at all drug stores throughout the United States.

ALWAYS SAY "BAYER ASPIRIN" NOW WHEN YOU BUY

Help Kidneys

If poorly functioning Kidneys and Bladder make you suffer from Getting Up Night, Nervousness, Rheumatic Pains, Stiffness, Burning, Smarting, Itching, or Acidity try the guaranteed Doctor's Prescription Cystex (Ginseng).

FINDS BANKS WILLING,
BORROWERS CAUTIOUS

Prominent Writer Refutes Statements Bankers Are Refusing Sound Loans—Describes Reasons for Reduced Volume of Credit.

FIGURES supplied by typical, well-managed banks in different parts of the country show that a high proportion of all applications for loans have been granted in the past year or two, says Albert W. Atwood in a recent article in *The Saturday Evening Post* on "The Idle Dollar." Excerpts from Mr. Atwood's article follow:

"Frequently banks state that as high as 90 per cent of all such applications are granted and for from 60 to 75 per cent of the amount asked for. Allowing that the bankers make these figures as favorable to their own case as possible, it seems strange that we are told again and again that banks are not lending at all.

"If we take into account the whole class of regular bank borrowers, the plain fact is very few want to borrow yet. For the word 'borrow' is merely another name for the word 'debt,' and we face a great world-wide drive to get out of debt.

"An experienced small-city banker, asked if banks were lending freely enough, wisely replied: 'The really good borrower does not wish to borrow now. In fact, I think our customers are making a remarkably fine showing in paying off their loans, especially loans of long standing.'

The Shrinkage of Credit
"Or if we think of business concerns rather than of individuals, it is conservative to say that those able to maintain high credit ratings have been mostly the ones able to maintain ample cash resources and, therefore, least in need of credit. As prices and costs fell, many concerns found themselves with plenty of cash because of the shrinkage in operations. Cash resources were still further swollen by reduced dividends, and smaller inventories made bank borrowing still less necessary.

"Expressed in another way, banks cannot expand credit, they cannot make loans, unless there is a demand for the same. Fundamentally, the business transaction makes the loan, the loan does not make the transaction. It is a mistake to try to force upon business organizations funds which they do not need. Under the circumstances the 'idle dollar' is a natural and proper enough phenomenon. A demand for credit is difficult to create artificially, and there is always danger in so doing.

"Banks must be liquid enough at all times to pay depositors. The idea of a commercial loan is that it represents a self-liquidating process in business. If the banker makes only those advances that are inherently sound, and selects his maturities wisely, he will have incoming funds to meet demands.

Government Lending
"As everybody knows, the Government has vast lending agencies, for home owners, farmers, and the like. These have nothing to do with the subject of this article, except that all such Government operations would be impossible if the banks did not lend the Government money for the purpose.

"No one can set a time when borrowing will be resumed. But it will come when men once more feel that conditions are sufficiently settled to warrant them in taking chances, in entering upon deals, and in trying to make money."

Mr. Atwood says that it may be that the banks are overcautious now, just as they were overconfident in 1929, but calls attention to the fact that until a little more than a year ago banks were falling "partly because they had loaned too freely, and were being criticized right and left for precisely that fault." He adds:

"Indeed the banks which had been cautious in their lending policy came through the crisis safely. Under such conditions it is utterly useless to criticize banks for not making loans. After the experience they had for several years, especially in 1932 and 1933, it is only natural that they should relax their requirements very slowly and gradually.

"Unfortunately, many of the applications for loans are not people who want temporary banking accommodation for three or six months and are quite able to meet their maturity dates, but are from those who really need permanent capital. They are busted and they want someone to stake them to a new start. What they really seek is a partner to furnish them with long-time capital. But depositors insist upon being paid on demand, and, therefore, it is a grave question whether banks should tie up their funds for any length of time."

HOW ONE FARMER
HELPED HIMSELF

A farmer accustomed to keeping records found that it cost \$16.50 to produce an acre of corn. His average yield was 33 bushels, selling for 50 cents per bushel. On this basis he was producing without either profit or loss.

A study of his costs indicated means by which the yields might be increased without proportional expenses. By making use of facts discovered at the Experiment Stations, the farmer secured an increased yield of four and one-half bushels per acre (37 1/2 bushels, instead of 33). By increasing the yield and holding down expenses, this farmer was able to make a profit of six cents per bushel.
